U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., AUGUST, 1924. No. 8

GENERAL SUMMARY.

The month opened with weather favorable for farm work and for crops. Rye harvest, which began during July, was nearly completed during the first decade. Some reports of black stem rust were received, chiefly affecting the late sown spring wheat. As harvesting of early sown spring wheat was well begun during the first days of the month, no great damage resulted from this cause. Rapid progress was made in threshing during the month, and at the close the greater portion of shocked small grain was threshed. A few reports of frost were received, and in some sections slight damage to corn and garden truck occurred. Haying was practically completed during the month, and while rain was needed in many sections for pastures and ranges, forage crops were good at the close of the month.

TEMPERATURE.

The mean temperature for the State was 63.8°, or 1.6° below the normal, and 0.8° higher than the mean for August, 1923. The highest mean reported was 68.4° at Linton, Emmons County; the lowest was 52.4° at Hansboro, Towner County. The highest temperature reported was 102° at Dickinson, Stark County, on the 28th; the lowest was 28° at Hansboro, Towner County, on the 16th. The greatest monthly range of temperature was 71° at Arnegard, McKenzie County; the least was 50° at Hansboro, Towner County. The greatest daily range was 54° at Dunn Center, Dunn County, on the 27th.

PRECIPITATION.

The average precipitation for the State was 1.65 inches, or 1.45 inches below the normal, and 0.25 inch less than the average for August, 1923. The greatest monthly amount reported was 3.96 inches at Larimore, Grand Forks County; the least was 0.07 inch at Richardton, Stark County. The greatest amount recorded in any 24 consecutive hours was 2.55 inches at Napoleon, Logan County, on the 21st. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS.

Auroras were observed at Devils Lake, Foxholm, Sharon and Towner on the 29th, and at Epping and Napoleon on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for August, 1924.

UNIVERSITY OF ILLINOIS

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXIII. Bismarck, N. D., September, 1924. No. 9

GENERAL SUMMARY.

The month opened with weather generally favorable for threshing, harvesting of flax, and other outdoor work, a condition that prevailed during the first decade. Showers during the fore part of the second decade delayed threshing considerably, but improved pastures, ranges and harvested fields, affording abundant feed for livestock, and benefited fall plowing. During the second decade some reports were received of frost damage to corn, but the crop was generally so far advanced that the damage was slight. Some delay occurred during the last decade to threshing, caused by showers, but at the close of the month most shock threshing was completed, and stack threshing was well advanced. Most all of the corn was out of danger from frosts at the end of the month.

TEMPERATURE.

The mean temperature for the State was 55.0°, or 1.4° below the normal, and 5.1° lower than the mean for September, 1923. The highest mean reported was 59.6° at McLeod, Ransom County; the lowest was 44.8° at Hansboro, Towner County. The highest temperature reported was 98° at Linton, Emmons County, on the 3d; the lowest was 20° at Dunn Center, Dunn County, on the 26th, and at Jamestown, Stutsman County, on the 29th. The greatest monthly range of temperature was 71° at Jamestown, Stutsman County; the least was 46° at Hansboro, Towner County. The greatest daily range was 59° at Dunn Center, Dunn County, on the 23d.

PRECIPITATION.

The average precipitation for the State was 2.31 inches, or 0.67 inch above the normal, and 0.08 inch less than the average for September, 1923. The greatest monthly amount reported was 5.12 inches at Jamestown, Stutsman County; the least was a trace at New England, Hettinger County. The greatest amount recorded in any 24 consecutive hours was 2.25 inches at Langdon, Cavalier County, on the 20th. A trace of snow was recorded at five stations. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS.

Auroras were observed at Devils Lake, Foxholm and Williston on the 2d; at Foxholm on the 4th and 14th; at Crosby on the 22d; at Bismarck, Bowman, Crosby, Dickinson, Eckman, Ellendale, Fessenden, Foxholm, Fullerton, Grand Forks, Howard, McClusky, McLeod, Melville, New England, Richardton, Sharon, Stanton, Valley City and Williston on the 23d; at Crosby, Finley, Grand Forks, Linton and Pettibone on the 24th; at Arnegard on the 28th, and at Towner on the 30th.

ERRATA, AUGUST, 1924.

Pages 29 and 30: Departure of precipitation from normal, for the State, should be −0.63 inches, instead of −1.45 inches, as published.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record. but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for September, 1924.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., OCTOBER, 1924. No. 10

GENERAL SUMMARY.

Unusual conditions characterized the weather during October, 1924. The mean temperature for the State was the highest of record; the average precipitation was also the highest of record, and it was the only October in the climatological history of the State with a prevailing wind direction southeast, all others being northwest. The month opened with clear weather, a condition that obtained until the 4th, when general showers occurred. The 6-7th were fair, but from the 8th to the 12th rain was general over the State; in fact, practically all the precipitation for the month was confined to those two periods. Scattered showers, however, occurred on the last two days of the month. Farm work generally made excellent progress from the 15th to the close of the month. Some reports of grain sprouting in shock were received. At the close of the month good headway had been made in threshing and the seeding of winter rye, and with fall plowing. Fall feed was abundant, and livestock generally was in excellent condition.

TEMPERATURE.

The mean temperature for the State was 50.3°, or 6.5° above the normal, and 6.3° higher than the mean for October, 1923. The highest mean reported was 55.0° at Wahpeton, Richland County; the lowest was 41.6° at Hansboro, Towner County. The highest temperature reported was 86° at Westhope, Bottineau County, on the 11th; the lowest was 19° at Jamestown, Stutsman County, on the 3d. The greatest monthly range of temperature was 63° at Bowbells, Burke County; the least was 42° at Ashley, McIntosh County, and at Valley City, Barnes County. The greatest daily range was 49° at Jamestown, Stutsman County, on the 3d, and at Linton, Emmons County, on the 25th.

PRECIPITATION.

The average precipitation for the State was 2.43 inches, or 1.43 inches above the normal, and 1.55 inches greater than the average for October, 1923. The greatest monthly amount reported was 5.74 inches at Powers Lake, Burke County; the least was 0.97 inch at Washburn, McLean County. The greatest amount recorded in any 24 consecutive hours was 2.45 inches at Bowbells, Burke County, on the 8th. The average number of days with 0.01 inch or more of precipitation was 7. The average snowfall was 0.3 inch; the greatest fall was 5.8 inches at Howard, Williams County.

AURORAS.

Auroras were observed at Powers Lake on the 17th and 18th; at McLeod on the 20th; at Crosby, Finley, Foxholm and Minto on the 21st; at Crosby, Grand Forks, New England, Powers Lake and Valley City on the 22d; at Arnegard, Bowman, Crosby, Devils Lake, Ellendale, Foxholm, McClusky, McLeod, New England, Sharon and Williston on the 23d; at Arnegard, Bowman, Crosby, Devils Lake, Ellendale, Foxholm, Grand Forks, Linton, McClusky, Moorhead, New England and Pettibone on the 24th; at Finley, Fullerton, Moorhead and Pettibone on the 25th; at Eckman on the 26th; at Powers Lake on the 27th, and at Eckman on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

UNIVERSITY OF ILLINOIS

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., NOVEMBER, 1924. No. 11

GENERAL SUMMARY.

The weather, taken as a whole, was generally favorable for farm and other outdoor work throughout the State. During the first decade threshing was generally completed, some late winter rye planted, and considerable fall plowing accomplished. During the second and third decades farm work was mostly confined to corn harvesting and grain marketing. Livestock ranged freely on pastures, ranges and harvested fields, and at the close of the month was in excellent condition.

TEMPERATURE.

The mean temperature for the State was 27.6°, or 1.0° above the normal, and 8.9° lower than the mean for November, 1923. The highest mean reported was 36.3° at McLeod, Ransom County; the lowest was 21.6° at Langdon, Cavalier County, and at Pembina, Pembina County. The highest temperature reported was 69° at Hettinger, Adams County, on the 9th, and at Finley, Steele County, on the 19th; the lowest was −15° at Howard, Williams County, on the 13th. The greatest monthly range of temperature was 76° at Hettinger, Adams County; the least was 38° at Lisbon, Ransom County. The greatest daily range was 53° at Hettinger, Adams County, on the 9th, and at Fessenden, Wells County, on the 14th.

PRECIPITATION.

The average precipitation for the State was 0.18 inch, or 0.40 inch below the normal, and 0.32 inch less than the average for November, 1923. The greatest monthly amount reported was 0.85 inch at Howard, Williams County; there was none at Forman, Sargent County, and at Wahpeton, Richland County. Eleven other stations reported but a trace. The greatest amount recorded in any 24 consecutive hours was 0.56 inch at Powers Lake, Burke County, on the 5th. The average snowfall was 1.9 inches, the greatest monthly fall being 10.0 inches at Pembina, Pembina County. The average number of days with 0.01 inch or more of precipitation was 2.

AURORAS.

Auroras were observed at New England on the 5th; at Grand Forks on the 9th, and at Sharon on the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for November, 1924.

VOL. XXXIII. BISMARCK, N. D., DECEMBER, 1924. No. 12

GENERAL SUMMARY.

Seasonable weather prevailed during the first thirteen days, and during this period rapid progress was made in corn harvesting, in grain marketing and other outdoor farm activities. Livestock ranged freely on harvested fields, pastures and ranges and very little yard feeding was required. The latter part of the month, however, was unfavorable. The general storm of the 14-17th stopped farm work, delayed rail and highway traffic, and being accompanied by low temperature, caused much suffering to humans and to livestock. Only light precipitation occurred from the 18th to the close of the month, but the temperature remained low throughout that period.

TEMPERATURE.

The mean temperature for the State was 2.9°, or 10.1° below the normal, and 19.4° lower than the mean for December, 1923. The highest mean reported was 9.6° at Marmarth, Slope County; the lowest was -3.0° at Pembina, Pembina County. The highest temperature reported was 58° at Marmarth, Slope County, on the 12th; the lowest was -46° at Dunseith, Rolette County, on the 27th. The greatest monthly range of temperature was 93° at Crosby, Divide County; the least was 65° at Wahpeton, Richland County. The greatest daily range was 60° at Arnegard, McKenzie County, on the 26th.

PRECIPITATION.

The average precipitation for the State was 0.43 inch, or 0.11 inch below the normal, and 0.11 inch more than the average for December, 1923. The greatest monthly amount reported was 1.00 inch at Willow City, Bottineau County; there was only a trace at Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 0.53 inch at Turtle Lake, McLean County, on the 14th. The average snowfall for the State was 5.3 inches.. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS.

Auroras were observed at McLeod on the 19th; at Sharon and Stanton on the 20th; at McLeod and Napoleon on the 21st, and at Foxholm on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., ANNUAL, 1924. No. 13

GENERAL SUMMARY.

The year 1924 will long be remembered as one of the most favorable in the climatological history of North Dakota. Not only were bounteous crops harvested, but prices for farm products were far above those of preceding years and resulted in general prosperity throughout the State. The mildness of the opening months and the coolness of the summer months formed almost ideal temperature conditions. The precipitation, while below the normal, was ample for all needs.

The mean annual temperature for the State was 38.2°, or 0.6° below the normal, and 2.5° lower than the mean for 1923. The highest mean annual temperature reported was 41.8° at Wahpeton, Richland County; the lowest was 34.6° at Langdon, Cavalier County. The highest temperature reported was 105° at Beach, Golden Valley County, on August 28th; the lowest was -46° at Dunseith, Rolette County, on December 27th. The temperature averaged above the normal during February, March, October and November, and below the normal during the remaining months. The highest mean annual temperature ever recorded in the State was 42.0° in 1921; the lowest was 35.8° in 1893. The highest temperature ever recorded in the State was 124° at Medora, Billings County, on September 3, 1912; the lowest was -56° at Goodall, McKenzie County, on January 12, 1916.

The average precipitation for the State was 17.55 inches, or 0.39 inch below the normal, and 0.21 inch less than the average for 1923. The greatest annual precipitation reported was 27.56 inches at Larimore, Grand Forks County; the least was 10.87 inches at New England, Hettinger County. The greatest monthly amount reported was 7.57 inches at Bowbells, Burke County, in June; there was none at Bowbells, Burke County, in January, at Forman, Sargent County, in January and November, at Lamoine, Kidder County, in January, at Parshall Mountrail County, in March, and at Wahpeton, Richland County, in January and November. The precipitation averaged above the normal during April, June, September and October, and below the normal during the remaining months. The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 28.5 inches. The average number of days with 0.01 inch or more of precipitation was 66. There were 158 clear days, 101 partly cloudy days, and 107 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—The month opened with severe weather prevailing in all sections, effectively stopping farm work and road construction, and necessitated considerable feeding of livestock. This condition obtained during the first and second decades. The last decade, however, was generally mild and pleasant, allowing livestock to range on harvested fields and ranges. The month was devoid of severe storms.

FEBRUARY.—Unusually mild and pleasant weather prevailed throughout the State during the month, the mean temperature being the highest of record for February. The month was free from severe storms, there was abundant sunshine and a deficiency of precipitation. Owing to the reduced snow covering, some apprehension was expressed in some sections as to condition of winter rye.

MARCH.—Like the weather which prevailed during the preceding month, March opened with mild temperature, which rapidly reduced the snow covering, a condition which prevailed during the first and second decades. During this period spring work on farms was begun, considerable spring wheat was planted in the central and southeast portions, and some spring plowing accomplished. During the last decade farm work was somewhat delayed, due to frozen ground in the east portion, and by low temperatures and snow in the west and central portions.

APRIL.—On the whole, favorable weather prevailed throughout the month for farm work, and good progress was made, especially in the seeding of small grain and in spring plowing. Winter rye came through in fair condition, some reports of winter killing being received. Pastures and ranges improved rapidly, and livestock were generally in good condition.

MAY.—Weather unfavorable for crops and for outdoor work generally prevailed throughout the State. Mean temperatures below the normal were reported from all sections, there was much cloudiness, and a deficiency in precipitation. The precipitation was unevenly distributed. While farm work made fair headway, crops were backward at the close of the month. Frosts were frequent, and some damage was reported. Much work was accomplished on highways, and roads were generally in excellent condition.

JUNE.—The weather during June was one of the most favorable in the climatological history of the State. The weather was cool, which was decidedly favorable for all small grains, and at the close of the month spring wheat, oats, barley, speltz and winter rye were in excellent condition. While somewhat too cool for the germination and growth of corn, that crop was also in good condition at the close of the month, being of good stand and color and free from weeds. Pastures afforded abundant feed, and tame and wild grasses promised an excellent hay crop. Considerable damage, however, was caused by hailstorms, particularly on the 18th, when winds of high velocity occurred.

JULY.—Favorable weather prevailed in all sections, especially for small grains, the temperature being generally below normal, and the precipitation sufficient and well distributed. At the close of the month all crops were excellent. Winter rye and barley harvest was well under way, and spring wheat was

[Continued on page 53.]

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49.]

headed in all sections, with but few reports of black stem rust. Corn and flax, which showed greatly increased acreages, were well advanced, considering the cool weather.

AUGUST.—Generally favorable weather prevailed. Rye harvest was completed during the first decade, and harvesting of other small grains began during this period. Some reports of black stem rust were received, but almost invariably on late sown spring wheat. Threshing of rye was well advanced and good progress was being made at the close of the month of other small grains. A few reports of frost were received, but none of a damaging nature.

SEPTEMBER.—The month opened with generally favorable weather for farm work, and threshing, flax harvesting and other outdoor work made good progress during the first decade. Showers during the fore part of the second decade delayed threshing considerably, but improved pastures, ranges and harvested fields, affording abundant feed for livestock, and greatly benefited fall plowing. During the second decade numerous reports of frosts were received, but as corn was so far advanced, no serious damage resulted. Some delay occurred during the last decade to threshing, but at the close of the month most of the shock threshing was completed, and stack threshing well advanced.

OCTOBER.—Unusual conditions characterized the weather during October. The mean temperature for the State was the highest of record, the average precipitation was the highest of record, and it was the only October of record in the climatological history of the State with a prevailing wind direction southeast, all others being northwest. Practically all of the precipitation was confined to the period 4th to 13th, inclusive. Farm work made excellent progress from the 15th to the close of the month, threshing being nearly completed, and much fall plowing and seeding of winter rye accomplished. Fall feed was abundant, and livestock generally in excellent condition.

NOVEMBER.—Taken as a whole, the weather was favorable for farm and other outdoor work. During the first decade threshing was generally completed, some late winter rye planted and considerable fall plowing accomplished. During the second and third decades farm work was mostly confined to corn harvesting and grain marketing. Livestock ranged freely on pastures, ranges and harvested fields, and were in good condition.

DECEMBER.—Seasonable weather prevailed during the first thirteen days, and during that period rapid progress was made in corn harvesting and in grain marketing. Livestock ranged freely, and but little yard feeding was required. The latter part of the month, however, was unfavorable. A general storm on the 14-17th stopped farm work, delayed rail and highway traffic, and being accompanied by low temperature, caused much suffering to humans and to livestock. Only light precipitation occurred from the 18th to the close of the month, but the temperature remained low.

Climatological Summary, 1924.

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIV BISMARCK, N. D., JANUARY, 1925 No. 1

GENERAL SUMMARY

The month opened with mild temperature general throughout the State, a condition that prevailed during the first decade. The second decade was considerably colder during the first half, but was warmer during the latter half, and except on the 25-27th was mild throughout the last decade. Only light snowfall occurred, the precipitation being below the normal in nearly all sections. The distribution was quite even geographically, as well as throughout the month. During the greater part of the month livestock ranged freely on pastures, ranges and harvested fields, and required but little feeding. Corn husking was practically completed, and much grain marketed. Main highways were in excellent condition generally, and at the close of the month most cross roads were open.

TEMPERATURE

The mean temperature for the State was 8.6°, or 3.7° above the normal, and 6.0° higher than the mean for January, 1924. The highest mean reported was 15.4° at Beach, Golden Valley County; the lowest was -0.5° at Pembina, Pembina County. The highest temperature reported was 52° at Berthold Agency, McLean County, on the 23d; the lowest was -35° at Napoleon, Logan County, on the 26th. The greatest monthly range of temperature was 79° at Epping, Williams County; the least was 53° at Maryville, Traill County. The greatest daily range was 58° at New Salem, Morton County, on the 27th.

PRECIPITATION

The average precipitation for the State was 0.22 inch, or 0.32 inch below the normal, and 0.01 inch less than the average for January, 1924. The greatest monthly amount reported was 1.17 inches at Fullerton, Dickey County; there was none at Bowbells, Burke County; Garrison, McLean County; Minot, Ward County; Washburn, McLean County, and Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 0.40 inch at Ashley, McIntosh County, Edgeley, LaMoure County, and Fullerton, Dickey County, on the 25th; at Hannah, Cavalier County, on the 18th, and at Pembina, Pembina County, on the 29th. The average snowfall for the State was 2.5 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Ellendale on the 15th; at Howard and Stanton on the 16th; at Berthold Agency and New England on the 19th, and at Foxholm, McKinney, Napoleon and Sharon on the 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIV BISMARCK, N. D., FEBRUARY, 1925 No. 2

GENERAL SUMMARY

The weather conditions which prevailed over North Dakota during February were similar in many respects to those which characterized February, 1924. While the temperature was nearly four degrees lower, it was nearly nine degrees above the normal; there was but 0.31 inch of precipitation, and the wind movement was lower than during the February of the preceding year. No severe storms occurred, there was an abundance of sunshine, and few drifting winds, which allowed livestock to range freely on ranges and harvested fields, thus saving much feed and labor. Outdoor work progressed almost uninterruptedly. All of the main highways were open throughout the month, and many of the cross roads were continually passable. The snow covering was reduced to nil in many parts of the State, which was not conducive to best results for winter rye.

TEMPERATURE

The mean temperature for the State was 16.5°, or 8.6° above the normal, and 3.8° lower than the mean for February, 1924. The highest mean reported was 26.8° at Hettinger, Adams County; the lowest was 8.3° at Pembina, Pembina County. The highest temperature reported was 62° at Berthold Agency, McLean County, on the 5th; the lowest was −39° at Grafton, Walsh County, on the 2d. The greatest monthly range of temperature was 88° at Grafton, Walsh County; the least was 59° at Amidon and Marmarth, both in Slope County. The greatest daily range was 73° at McKinney, Renville County, on the 2d.

PRECIPITATION

The average precipitation for the State was 0.31 inch, or 0.18 inch below the normal, and 0.10 inch less than the average for February, 1924. The greatest monthly amount reported was 1.80 inches at Cando, Towner County; there was none at Bowbells, Burke County; Bowman, Bowman County; Hettinger, Adams County, and Westhope, Bottineau County. Seven other stations reported only a trace. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Cando, Towner County, on the 2d. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 3.6 inches.

AURORAS

Auroras were observed at Sharon on the 24th; at Pettibone on the 25th, and at Howard on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

OL. XXXIV BISMARCK, N. D., MARCH, 1925 No. 3

GENERAL SUMMARY

Taking conditions as a whole, mild and pleasant weather revailed in all sections during the greater part of the month. arm work over the southern portion of the State began about he 15th, and by the 22d was general throughout all sections. nows over the northern portion of the State during the first nd second decades delayed spring work in that section. During the latter part of the month much seeding of spring wheat as accomplished. Pastures and ranges afforded much forage r livestock during the month. Winter rye came through the inter in generally good condition, although some reports of inter killing due to lack of snow covering were received. onsidering the season of the year, highways were in exceptionally good condition.

TEMPERATURE

The mean temperature for the State was 27.4°, or 4.8° above he normal, and 1.9° higher than the mean for March, 1924. he highest mean reported was 34.4° at Ashley, McIntosh ounty; the lowest was 20.4° at Hansboro, Towner County. he highest temperature reported was 75° at Bismarck, Bureigh County, Ellendale, Dickey County, Fullerton, Dickey ounty, and Wahpeton, Richland County, on the 25th; the owest was −26° at Hansboro, Towner County, and Maddock, enson County, on the 1st; at Marmarth, Slope County, on the 3th, and at Willow City, Bottineau County, on the 14th. The reatest monthly range of temperature was 96° at Hettinger, dams County; the least was 67° Lisbon, Ransom County. he greatest daily range was 66° at Donnybrook, Ward County, n the 2d.

PRECIPITATION

The average precipitation for the State was 0.67 inch, or .16 inch below the normal, and 0.22 inch more than the verage for March, 1924. The greatest monthly amount reorted was 2.00 inches at Howard, Divide County; the least as 0.05 inch at Edgeley, LaMoure County, and Wahpeton, ichland County. The greatest amount recorded in any 24 onsecutive hours was 1.45 inches at Howard, Divide County. he average number of days with 0.01 inch or more of precipiation was 4. The average snowfall was 6.0 inches.

AURORAS

Auroras were observed at Linton, Power and Sharon on the st, and at New England on the 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIV Bismarck, N. D., April, 1925 No. 4

GENERAL SUMMARY

The month opened with mild temperatures and generally dry weather, a condition which obtained during the first decade. During the second decade the temperatures were lower, light to killing frosts being reported, and there were abundant scattered showers. The third decade opened with cloudy weather, mild temperatures, and light to moderate precipitation, but fair weather generally prevailed during the last days of the month. Taken as a whole, the weather was favorable for the germination and growth of crops, as well as for farm and other outdoor work. At the close of the month spring wheat, oats, and barley were up to good stand and color, flax seeding and potato planting were well advanced, and much spring plowing for corn was accomplished. Highways were generally in excellent condition, and much road work was being done.

TEMPERATURE

The mean temperature for the State was 47.8°, or 6.1° above the normal, and 8.5° higher than the mean for April, 1924. The highest mean reported was 52.1° at Wahpeton, Richland County; the lowest was 44.0° at Howard, Divide County. The highest temperature reported was 85° at four stations on the 10th and other dates; the lowest was 10° at Hansboro, Towner County, on the 29th. The greatest monthly range of temperature was 68° at Hansboro, Towner County; the least was 50° at Epping, Williams County. The greatest daily range was 58° at McLeod, Ransom County, on the 10th.

PRECIPITATION

The average precipitation for the State was 1.64 inches, or 0.26 inch above the normal, and 0.91 inch less than the average for April, 1924. The greatest monthly amount reported was 4.24 inches at McLeod, Ransom County; the least was 0.63 inch at Eckman, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 1.50 inches at McLeod, Ransom County, on the 18th. The average number of days with 0.01 inch or more of precipitation was 6. The greatest snowfall was 1.0 inch at McClusky, Sheridan County, the average for the State being a trace.

AURORAS

Auroras were observed at Eckman and Foxholm on the 15th; at Foxholm on the 20th, and at Arnegard on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for April, 1925

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIV BISMARCK, N. D., MAY, 1925 No. 5

GENERAL SUMMARY

The weather at the opening of the month was too cool for best results, frosts and freezing temperatures being frequent, a condition which prevailed during the first and second decades. Farm work, however, made rapid advancement during this period. Much higher temperature prevailed during the third decade, and spring wheat, oats, barley, speltz and flax made rapid growth. Rain was needed in most sections for the germination of late planted corn and flax, although early planted were up to good stand and color. Pastures, ranges and meadows were in good to excellent condition, although rains would be beneficial Highways were in excellent condition, and more than the usual amount of road construction was under way at the close of the month.

TEMPERATURE

The mean temperature for the State was 53.6°, or 1.0° above the normal, and 6.7° higher than the mean for May, 1924. The highest mean reported was 56.2° at Epping, Williams County; the lowest was 50.0° at Donnybrook, Ward County, and at Hansboro, Towner County. The highest temperature reported was 111° at Westhope, Bottineau County, on the 30th; the lowest was 10° at Hansboro, Towner County, on the 16th. The greatest monthly range of temperature was 97° at Westhope; the least was 66° at Marmarth, Slope County. The greatest daily range was 61° at Bottineau, Bottineau County, on the 11th.

PRECIPITATION

The average precipitation for the State was 1.44 inches, or 1.11 inches below the normal, and 0.65 inch more than the average for May, 1924. The greatest monthly amount reported was 4.85 inches at Finley, Steele County; the least was 0.38 inch at Foxholm, Ward County. The greatest amount recorded in any 24 consecutive hours was 2.50 inches at Amenia, Cass County, on the 22d. The average number of days with 0.01 inch or more of precipitation was 4. Snow fell at a number of stations, the greatest fall being 0.5 inch at Dunseith, Rolette County.

AURORAS

Auroras were observed at Powers Lake on the 13th; at Ellendale on the 25th, and at Fessenden and Grand Forks on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIV BISMARCK, N. D., JUNE, 1925 No. 6

GENERAL SUMMARY

The month opened with light to heavy beneficial rains in all parts of the State, and with the exception of the 9th, this condition obtained until the 18th. Scattered showers also occurred during the period 22d-26th. The average rainfall for the month was, with but two exceptions, the heaviest of record for the State. The precipitation was well distributed geographically, and all sections reported precipitation in excess of the normal. In many parts of the State droughty conditions prevailed at the opening of the month, but these were all relieved by the copious rains. Crops of all kinds made rapid growth, and at the close of the month presented an outlook for yields above the normal. Heavy rains, however, damaged crops considerably in the extreme eastern portion of the State, where much ground was under water. Some losses from hail were reported, but in no instance was the area large. Pastures, ranges, meadows and livestock were excellent at the close of the month.

TEMPERATURE

The mean temperature for the State was 61.5°, or 1.3° below the normal, and 2.9° higher than the mean for June, 1924. The highest mean reported was 65.4° at McLeod, Ransom County; the lowest was 57.6° at Hansboro, Towner County. The highest temperature reported was 98° at New Salem, Morton County, on the 21st; the lowest was 30° at Hansboro, Towner County, on the 27th. The greatest monthly range of temperature was 64° at Epping, Williams County; the least was 44° at Linton, Emmons County. The greatest daily range was 51° at Epping, Williams County, on the 20th.

PRECIPITATION

The average precipitation for the State was 6.07 inches, or 2.57 inches above the normal, and 1.90 inches more than the average for June, 1924. The greatest monthly amount reported was 12.97 inches at Fullerton, Dickey County; the least was 3.37 inches at New England, Hettinger County. The greatest amount recorded in any 24 consecutive hours was 3.57 inches at Ellendale on the 22-23d. The average number of days with 0.01 inch or more of precipitation was 14.

AURORAS

Auroras were observed at New England on the 11th; at Ellendale and Howard on the 12th; at Ellendale and Donnybrook on the 13th; at Ellendale on the 17th; at Sharon on the 22d; at Fessenden on the 24th; at Ellendale on the 25th; at Arnegard and Donnybrook on the 27th, and at Howard on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

OL. XXXIV   BISMARCK, N. D., JULY, 1925   No. 7

GENERAL SUMMARY

The month opened with temperature somewhat above the ormal, and with abundant sunshine, a condition which pre- ailed throughout the first decade, with the exception of the eriod, 6th to 8th, inclusive, when scattered showers occurred. he second decade was generally hot and dry, the high temper- tures of the 10th to 14th, inclusive, causing considerable dam- ge to small grains, but very beneficial for corn The third ecade was considerably cooler, with general showers from the 3d to the 26th, inclusive. At the close of the month harvest- ng of barley and rye was well advanced, and early wheat har- est was under way. Rain was generally needed in all sections f the State for corn, late flax, pastures and ranges.

TEMPERATURE

The mean temperature for the State was 66.7°, or 0.8° below ie normal, and 1.2° higher than the mean for July, 1924. he highest mean reported was 69.6° at Richardton, Stark ounty; the lowest was 61.6° at Hansboro, Towner County. he highest temperature reported was 106° at Beach, Golden alley County, on the 14th, and at Fessenden, Wells County, n the 12th; the lowest was 29° at Carson, Grant County, on ie 30th and 31st. The greatest monthly range of tempera- ire was 70° at Beach, Golden Valley County; the least was 1° at Amenia, Cass County. The greatest daily range was 63° Fessenden, Wells County, on the 12th.

PRECIPITATION

The average precipitation for the State was 1.34 inches, or .27 inches below the normal, and 0.61 inch less than the verage for July, 1924. The greatest monthly amount re- orted was 4.35 inches at Moorhead; the least was 0.33 inch at unn Center, Dunn County, Linton, Emmons County, and Iandan, Morton County. The greatest amount recorded in any 4 consecutive hours was 2.94 inches at Moorhead on the 5th. he average number of days with 0.01 inch or more of precipi- tion was 6.

AURORAS

Auroras were observed at Howard on the 10th and 13th; at ew England on the 14th; at Finley, McLeod, Sharon, West- ope and Willow City on the 21st; at Willow City on the 22d, nd at Sharon on the 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

OL. XXXIV   BISMARCK, N. D., AUGUST, 1925   No. 8

GENERAL SUMMARY

The month opened with generally cool and dry weather, a ondition which prevailed during the first and second decades, lthough occasional high temperatures were reported during ne first decade. During this period rapid progress was made 1 the harvesting of late grain and flax, and rye threshing nade good progress. High temperatures were general through- it the last decade, and caused late corn and flax to deterio- ite. Ranges, pastures and meadows suffered considerably om drought during this period. At the close of the month rm work was considerably ahead of the season. In the east- n part of the State fall plowing was well under way, but the il was too dry in west and central portions for best results. ivestock at the close of the month was in good condition.

TEMPERATURE

The mean temperature for the State was 67.9°, or 2.5° above e normal, and 4.1° higher than the mean for August, 1924. ne highest mean reported was 72.1° at Wahpeton, Richland ounty; the lowest was 62.4° at Hansboro, Towner County. ne highest temperature reported was 110° at Linton, Em- ons County, on the 5th; the lowest was 29° at Carson, Grant ounty, on the 25th. The greatest monthly range of tempera- re was 75° at Linton, Emmons County; the least was 48° at mbina, Pembina County. The greatest daily range was 60° Hettinger, Adams County, on the 27th.

PRECIPITATION

The average precipitation for the State was 1.07 inches, or 21 inches below the normal, and 0.58 inch less than the erage for August, 1924. The greatest monthly amount re- rted was 3.40 inches at Pembina, Pembina County; the least is 0.05 inch at Arnegard, McKenzie County. The greatest nount recorded in any 24 consecutive hours was 2.10 inches Manfred, Wells County, on the 17th. The average number days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Arnegard, Howard and Willow City the 7th; at Foxholm on the 8th; at Arnegard and McLeod the 9th; at Howard on the 16th; at Foxholm and Willow ty on the 17th; at Fessenden on the 21st; at Bismarck, Dev- Lake, Ellendale, Foxholm, Larimore, McLeod and Willow ty on the 22d; at Bowman, Ellendale, Howard and Napoleon the 23d; at Fullerton and Howard on the 24th, and at Na- leon on the 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for August, 1925

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

OL. XXXIV   BISMARCK, N. D., SEPTEMBER, 1925   NO. 9

GENERAL SUMMARY

The month opened with hot dry weather which caused late orn and flax to ripen rapidly and allowed threshing to make apid progress. Light to heavy showers occurred from the 4th the 20th, inclusive, and during this period much delay was aused to most kinds of outdoor work, but greatly improved e soil for fall plowing and for the seeding of winter rye rom the 20th to the 27th, inclusive, rapid progress was made threshing and other farm work. Showers were general dur-g the last three days of the month, being quite heavy in some ections. At the close of the month threshing was well ad-anced, much fall plowing was accomplished, and seeding of inter rye was completed, early sown being up to good stand. orn cutting and silo filling was also well advanced.

TEMPERATURE

The mean temperature for the State was 58.1°, or 1.7° above e normal, and 3.1° higher than the mean for September, 1924. he highest mean reported was 63.8° at Wahpeton, Richland ounty; the lowest was 52.4° at McKinney, Renville County. he highest temperature reported was 103° at Fessenden, ells County, on the 3d; the lowest was 20° at Linton, Emmons ounty, on the 28th. The greatest monthly range of tempera-re was 81° at Linton, Emmons County; the least was 52° at rand Forks, Grand Forks County. The greatest daily range as 73° at Linton, Emmons County, on the 3d.

PRECIPITATION

The average precipitation for the State was 2.74 inches, or .10 inches above the normal, and 0.43 inch more than the verage for September, 1924. The greatest monthly amount re-orted was 7.26 inches at Mayville, Traill County; the least as 0.46 inch at Dickinson, Stark County. The greatest mount recorded in any 24 consecutive hours was 3.11 inches evils Lake, Ramsey County, on the 8-9th. Snow, ranging om a trace to 0.5 inch, occurred at four stations. The average umber of days with 0.01 inch or more of precipitation was 8.

AURORAS

Auroras were observed at Bismarck, Howard and Willow City n the 1st; at Carson on the 12th; at Arnegard, Carson, Devils ake, Foxholm, Howard, New England and Willow City on e 13th; at Arnegard, Bowman, Foxhom, Howard, McLeod, ew England and Willow City on the 14th; at Carson, Foxholm nd Willow City on the 15th; at Fessenden on the 16th; at tanton on the 19th; at Arnegard, Ellandale, Towner, Willis-n and Willow City on the 20th; at Crosby and New England n the 21st; at Crosby and Sharon on the 22nd; at Arnegard, ismarck, Bowman, Carson, Crosby, Ellendale, Fessenden, oxholm, Grand Forks, Howard, Larimore, McKinney, cLeod, Minto, New England, Sharon, Stanton, Williston, Wil-w City and Moorhead (Minn.) on the 23rd; at Bismarck, rosby, Devils Lake, Epping, Grand Forks and McClusky on e 24th; at Crosby on the 25th, at Dickinson on the 26th; at oward and Valley City on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXIV   BISMARCK, N. D., OCTOBER, 1925   No. 10

GENERAL SUMMARY

The month of October, 1925, was the coldest of record in the climatological history of North Dakota, the mean temperature being 33.3°, or 10.5° below the normal. The nearest approach to this low mean was in 1919, when 33.5° was recorded. The lowest temperature recorded was −16° at Carson, Grant County, on the 29th, and this is also a record for low temperature in North Dakota for October. The month opened with cloudy and threatening weather, and frequent snows occurred during the first three weeks, interfering greatly with late threshing, potato digging and corn husking. During the last week there was a great improvement, and these activities were resumed with good results. Livestock was generally in good condition, and much shipping was done during the month.

TEMPERATURE

The mean temperature for the State was 33.3°, or 10.5° below the normal, and 17.0° lower than the mean for October, 1924. The highest mean reported was 37.6° at McLeod, Ransom County; the lowest was 28.0° at Carson, Grant County. The highest temperature reported was 66° at Hettinger, Adams County, on the 10th; the lowest was −16° at Carson, Grant County, on the 29th. The greatest monthly range of temperature was 80° at Carson, Grant County; the least was 49° at Finley, Steele County. The greatest daily range was 66° at Dickinson, Stark County.

PRECIPITATION

The average precipitation for the State was 0.78 inch, or 0.22 inch below the normal, and 1.65 inches less than the average for October, 1924. The greatest monthly amount reported was 2.53 inches at Powers Lake, Burke County; the least was 0.05 inch at Edgeley, LaMoure County, and Lisbon, Ransom County. The greatest amount recorded in any 24 consecutive hours was 1.10 inches at Howard, Williams County, on the 3d. The average snowfall was 3.7 inches; the greatest fall reported was 14.0 inches at Finley, Steele County. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at McLeod on the 6th; at Ellendale, Energy and Foxholm on the 8th; at Ellendale, Foxholm and McKinney on the 9th; at Devils Lake and Willow City on the 10th; at Crosby, Energy, Foxholm, Stanton and Willow City on the 11th; at Ellendale and Fullerton on the 13th; at Ellendale, Foxholm and McKinney on the 15th; at Foxholm and McLeod on the 21st; at Grand Forks on the 22d; at Eckman, Foxholm, Grand Forks, Howard, McKinney, McLeod, New England, Sharon and Williston on the 23d; at Arnegard on the 24th; at Epping and McKinney on the 28th; at Epping and Foxholm on the 30th, and at McKinney, New England and Williston on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for October, 1925

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXIV   Bismarck, N. D., November, 1925   No. 11

GENERAL SUMMARY

With the exception of the two periods, 6-7th and 27-28th,
ild temperatures prevailed throughout the State, and farm
nd other outdoor work progressed uninterruptedly. As a re-
ult of these favorable conditions, farm work and road construc-
ion made rapid advancement. The precipitation was light in
early all sections, the stormiest periods being the 3-5th, 14-
7th, 21st, and 29-30th.

TEMPERATURE

The mean temperature for the State was 28.8°, or 2.2° above
he normal, and 1.2° higher than the mean for November, 1924.
'he highest mean reported was 33.6° at Beach, Golden Valley
ounty; the lowest was 24.0° at Hansboro, Towner County.
'he highest temperature reported was 69° at New Salem, Mor-
on County, on the 11th; the lowest was −17° at Carson, Grant
ounty, on the 7th. The greatest monthly range of tempera-
ure was 81° at Carson, Grant County; the least was 51° at
angdon, Cavalier County. The greatest daily range was 60° at
amestown, Stutsman County, on the 8th.

PRECIPITATION

The average precipitation for the State was 0.25 inch, or
.33 inch below the normal, and 0.07 inch more than the
verage for November, 1924. The greatest monthly amount re-
orted was 1.24 inches at Moorhead; there was none at two
tations, and eight stations reported but a trace. The average
nowfall was 1.3 inches; the average number of days with 0.01
nch or more of precipitation was 2.

AURORAS

Auroras were observed at Bowman on the 1st; at Linton on
he 3d and 5th; at Arnegard, Berthold Agency, Bismarck,
owman, Devils Lake, Dogden, Ellendale, Energy, Fessenden,
oxholm, Howard, New England, Powers Lake, Stanton,
owner and Willow City on the 8th; at Arnegard, Bismarck,
ottineau, Bowman, Devils Lake, Donnybrook, Ellendale, En-
rgy, Foxholm, Grand Forks, Howard, New England, Towner
nd Willow City on the 9th; at Arnegard, Bottineau, Bowman,
Devils Lake, Fessenden, Foxholm, Grand Forks, Howard and
owner on the 10th; at Donnybrook and Grand Forks on the
1th; at Linton on the 19th and 24th.

ERRATA FOR MOORHEAD, MINN.

January, 1925.—Page 1, make lowest barometer 29.54 on 6th; make 7 p. m. humidity
9. Page 2, make total snowfall 2 3; make mean temperature 7 8; make lowest tem-
erature −21 on 26th. Page 4, make maximum temperature 27th 11; make minimum
emperature 6th 17; make minimum temperature 7th 4; make minimum temperature
th −15; make minimum temperature 11th 1; make minimum temperature 31st −12;
nake mean minimum temperature 1 3.

February, 1925.—Page 5, make lowest barometer 29 56 on 24th; make noon humidity
3 Page 6 make partly cloudy days 7; make cloudy days 14; make total snowfall 10 6.
Page 8, make minimum temperature 8th 21; make minimum temperature 20th 6; make
nean minimum temperature 4 9.

March, 1925.—Page 9, make highest barometer 30.57 on 14th; make lowest barometer
29 24 on 9th. Page 12, make maximum temperature 19th 35

April, 1925—Page 14, make mean temperature 49.6; make greatest amount of precipitation in 24 hours 0.77. Page 16, make minimum temperature 13th 42; make minimum temperature 18th 44; make minimum temperature 28th 36; make mean minimum temperature 38 1.

May, 1925.—Page 17, make lowest barometer 29.27 on the 22d. Page 18; make total snowfall T.

June, 1925.—Page 21, make mean barometer 29.84; make lowest barometer 29.19 on 8th; make 7 a. m. humidity 81; make total wind movement 5,119; make average hourly velocity 7.1; make highest wind velocity 60 miles per hour from northwest on 5th. Page 22, make greatest amount of precipitation in 24 hours 1.38.

July, 1925.—Page 25, make 7 p. m. humidity 60. Page 26, make number of clear days 22; make number of partly cloudy days 6.

August, 1925.—Page 29, make mean barometer 29.94.

October, 1925.—Page 40, make maximum temperature 31st 51; make mean maximum 41.9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIV Bismarck, N. D., December, 1925 No. 12

GENERAL SUMMARY

Mild temperature, deficient precipitation, moderate winds, and somewhat more than the usual cloudiness characterized the weather during December. During the past thirty-five years, or since the establishment of the Climatological Service in the State, there have been but seven warmer Decembers, the highest mean monthly temperature being 22.7° in 1913. With the exception of the latter part of the third decade, mild temperature prevailed in practically all sections throughout the month. As a result of these favorable conditions, livestock ranged freely on pastures, ranges and harvested fields, thus saving an unusually large quantity of feed. Highway work continued with but slight interruption, and excellent progress was made.

TEMPERATURE

The mean temperature for the State was 16.5°, or 3.5° above the normal, and 13.6° higher than the mean for December, 1924. The highest mean reported was 23.7° at Beach, Golden Valley County; the lowest was 9.8° at Hansboro, Towner County. The highest temperature reported was 67° at Steele, Kidder County, on the 10th; the lowest was −38° at Marmarth, Slope County, on the 26th. The greatest monthly range of temperature was 94° at Carson, Grant County, and Marmarth, Slope County; the least was 55° at Grafton, Walsh County. The greatest daily range was 53° at Jamestown, Stutsman County, on the 30th.

PRECIPITATION

The average precipitation for the State was 0.28 inch, or 0.26 inch below the normal, and 0.15 inch less than the average for December, 1924. The greatest monthly amount reported was 1.20 inches at Linton, Emmons County; there was none at Bowman, Bowman County; Dunn Center, Dunn County; Lisbon, Ransom County, and Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 0.62 inch at Forman, Sargent County, on the 3d. The average snowfall was 2.6 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Grand Forks on the 6th and 7th, and at Arnegard on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXIV BISMARCK, N. D., ANNUAL, 1925 No. 13

GENERAL SUMMARY

From a comfort standpoint the weather in North Dakota during the year 1925 was admirable, the temperature being above the normal during the spring, fall and winter months, with the exception of October, and below normal during June and July. From a crop standpoint the weather was also favorable, taking the State as a whole. While the average precipitation for the State was below normal, the deficiencies occurred mostly during the winter months. During the crop growing season there was more than the usual rainfall, especially over the extreme eastern and southeastern portions of the State. As a result of these favorable conditions North Dakota produced an abundance of crops of all kinds. With the exception of a few hailstorms, no storms of a damaging nature occurred.

The mean annual temperature for the State was 40.6°, or 1.8° above the normal, and 2.4° higher than the mean for 1924. The highest mean annual temperature reported was 43.3° at Ashley, McIntosh County, and Beach, Golden Valley County; the lowest was 36.5° at Langdon, Cavalier County. The highest temperature reported was 111° at Westhope, Bottineau County, on May 30th; the lowest was -39° at Grafton, Walsh County, on February 2d.

The average annual precipitation for the State was 16.81 inches, or 1.13 inches below the normal, and 0.74 inch less than the average for 1924. The greatest annual precipitation reported was 28.33 inches at Finley, Steele County; the least was 9.80 inches at New England, Hettinger County. The greatest monthly amount reported was 12.97 inches at Fullerton, Dickey County, during June; stations reporting none were Bowbells, Garrison, Minot, Washburn and Westhope in January; Bowbells, Bowman, Hettinger and Westhope in February; Dunn Center, Hettinger and Richardton in November; Bowman, Dunn Center, Lisbon and Westhope in December. The precipitation averaged above the normal during April, June and September, and below the normal during the remaining months. The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 19.7 inches. The average number of days with 0.01 inch or more of precipitation was 64. There were 158 clear days, 107 partly cloudy days, and 100 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—Except during the first half of the second decade the temperature ranged decidedly above the normal. Only light snowfall occurred, the precipitation in all sections being below normal. During the greater part of the month livestock ranged freely on pastures, ranges and harvested fields, thus saving much feed. Corn husking was completed, and much grain marketed.

FEBRUARY.—Mild temperature generally prevailed in all sections, and only light snowfall occurred. Outdoor work progressed almost uninterruptedly throughout the month. All of the main highways were open. Snow covering was reduced to nil in most sections of the State, a condition unfavorable for winter rye.

MARCH.—Weather similar to that of the preceding month generally prevailed. Spring work on farms progressed rapidly during the third decade. Pastures and ranges afforded much forage for livestock, thus saving much feed. Winter rye generally came through the winter satisfactorily. Considering the season of the year, highways were in exceptionally good condition.

APRIL.—Although the temperature during the second decade was somewhat below the normal, the temperature for the month as a whole was mild and favorable for germination and growth of crops. Spring work made excellent progress, and at the close of the month spring wheat, oats and barley were up to good stand and color, and flax seeding and potato planting were well advanced.

MAY.—Temperature somewhat too low for best results prevailed during the first and second decades, although the mean for the month was slightly above the normal. Small grains of all kinds made rapid growth, and were in excellent condition. Corn and flax, however, were in need of rain at the close of the month. Highways were in excellent condition, and an unusually large amount of highway construction work was under way.

JUNE.—The month opened with light to heavy beneficial rains in all parts of the State, and with the exception of the 9th, this condition obtained until the 18th. Scattered showers occurred on the 22d-26th. The average precipitation for the State was, with but two exceptions, the highest of record. The temperature averaged somewhat below normal. Some losses from hail were reported, but the amount of damage in no instance was large.

JULY.—The month opened with temperature somewhat above the normal, and with abundant sunshine, and continued throughout the first decade. The second decade was generally hot and dry, the high temperature of the 10th to 14th, inclusive, doing considerable damage to small grains, but was very beneficial for corn. The third decade was much cooler, with showers general from the 23d to 26th, inclusive. More rain, however, was needed in most sections for corn, late flax, pastures and ranges.

The mean departures from normal precipitation are based on records from stations that have ten or more years of observations.

T. indicates trace.

Monthly and Annual Mean Temperatures for the Year 1925, with Departures from the Normal

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing. [b], 2 days missing, etc.

[Continued from page 49]

AUGUST.—The month opened with generally cool and dry eather, a condition which prevailed during the first and secnd decades. During this period rapid progress was made in arvesting small grains, and in threshing winter rye and early pring wheat. High temperatures were general throughout the ıst decade, and caused late corn and flax to deteriorate. anges, pastures and meadows suffered considerably from rought during this period. At the close of the month farm ork was generally ahead of the season.

SEPTEMBER.—The month opened with hot, dry weather hich caused late corn and flax to ripen rapidly, and allowed hreshing to make rapid progress. Light to heavy precipitation ccurred from the 4th to the 20th, greatly delaying outdoor ork, but improving the soil conditions for fall plowing and the eeding of winter rye. At the close of the month threshing as well advanced, much fall plowing had been accomplished, he seeding of winter rye was completed, and fall feed was bundant.

OCTOBER.—The temperature during October, 1925, was the owest of record for the month in the climatological history of he State. The lowest temperature was −16° at Carson, Grant ounty, the record for the State for October. The month pened with cloudy and threatening weather, and frequent howers occurred during the first three weeks, interfering reatly with late threshing, potato digging and corn husking. mproved conditions prevailed during the last week, and rapid rogress was made in all outdoor activities. Livestock was genrally in good condition, and much shipping was done during he month.

NOVEMBER.—With the exception of two short periods, 6-7th nd 27-28th, mild temperature prevailed throughout the State, nd farm and other outdoor work progressed uninterruptedly. s a result of these favorable conditions, farm work and road onstruction made rapid advancement. The precipitation was ight in nearly all sections, the stormiest periods being the -5th, 14-17th, 21st, and 29-30th.

DECEMBER.—Mild temperature, deficient precipitation, modrate winds and somewhat more than the usual cloudiness characterized the weather during the month. With the exception of the latter part of the third decade, mild temperature prevailed in practically all sections throughout the month. As a result of these favorable conditions, livestock ranged freely on pastures, ranges and harvested fields, thus saving an unusually large amount of feed. Highway work was continued with but slight interruption, and excellent progress was made.

Climatological Summary, 1925

CLIMATOLOGICAL DATA

MAR 3 1926

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXV BISMARCK, N. D., JANUARY, 1926 No. 1

GENERAL SUMMARY

The weather throughout the State was mild and pleasant, the mean temperature being, with but two exceptions, the highest of record since the climatological service was established in 1892. Only light scattered precipitation occurred, allowing outdoor work to proceed without interruption. Ice harvest was completed during the month, the average thickness of ice being 24 inches. Considerable highway construction work was accomplished. Livestock ranged freely on ranges, pastures and harvested fields, and thus saved much feed, and at the close of the month range cattle and horses were in excellent condition.

TEMPERATURE

The mean temperature for the State was 16.3°, or 11.4° above the normal, and 7.7° higher than the mean for January, 1925. The highest mean reported was 22.0° at Ashley, McIntosh County; the lowest was 7.8° at Pembina, Pembina County. The highest temperature reported was 55° at Steele, Kidder County, on the 17th; the lowest was −30° at Hansboro, Towner County, and at Minto, Walsh County, on the 28th. The greatest monthly range of temperature was 77° at Carson, Grant County; the least was 53° at Howard, Williams County, and McClusky, Sheridan County. The greatest daily range was 72° at Jamestown, Stutsman County, on the 29th.

PRECIPITATION

The average precipitation for the State was 0.38 inch, or 0.16 inch below the normal, and 0.16 inch more than the average for January, 1925. The greatest monthly amount reported was 1.10 inches at Hettinger, Adams County; there was none at Hansboro, Towner County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Stanton, Mercer County, on the 31st. The average snowfall for the State was 4.1 inches. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS

Auroras were observed at Linton on the 3d; at Howard on the 7th; at Foxholm on the 8th and 10th; at Arnegard, Beach, Crosby, Dogden, Fessenden, Foxholm, Howard, McLeod, Sharon and Willow City on the 12th; at Beach, Crosby, Ellendale, Foxholm, Howard, McLeod, New England, Sharon and Williston on the 13th; at Ellendale, New England and Williston on the 14th; at Foxholm, Howard and Willow City on the 18th; at Dogden on the 23d; at Bismarck, Grand Forks, Sharon and Moorhead on the 26th, and at Epping on the 28th and 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

OL. XXXV BISMARCK, N. D., FEBRUARY, 1926 No. 2

GENERAL SUMMARY

Unusually mild temperature, deficient precipitation, more ian the average sunshine, and an absence of bad storms made ie weather during the month one of the most enjoyable in the imatological history of the State. The mean temperature was ie highest of record for February in the State. All stations ported mean temperatures above the normal. Light scattered recipitation occurred on the 2-3d, 8th, 12-13th, and 20-21st, ie heaviest occurring in the southeastern part of the State. As result of these favorable conditions, outdoor work continued ninterruptedly throughout the month, the wagon roads were pen in all sections, and livestock ranged freely on ranges and arvested fields.

TEMPERATURE

The mean temperature for the State was 22.3°, or 14.4° above ie normal, and 5.8° higher than the mean for February, 1925. he highest mean reported was 29.0° at Beach, Golden Valley ounty; the lowest was 13.7° at Hansboro, Towner County. he highest temperature reported was 58° at Berthold Agency, IcLean County, on the 27th; the lowest was −19° at Hansboro, 'owner County, on the 1st. The greatest monthly range of emperature was 67° at McKinney; the least was 45° at Bowian, Bowman County, and Hettinger, Adams County. The reatest daily range was 46° at Langdon, Cavalier County, on ie 22d.

PRECIPITATION

The average precipitation for the State was 0.41 inch, or .08 inch below the normal, and 0.10 inch less than the verage for February, 1925. The greatest monthly amount reorted was 1.44 inches at Fullerton, Dickey County; the least as a trace at Berthold Agency, McLean County, and at Steele, Kidder County. The greatest amount recorded in any 24 conecutive hours was 0.85 inch at Fullerton, Dickey County. The verage number of days with 0.01 inch or more of precipitation as 4. The average snowfall was 3.7 inches.

AURORAS

Auroras were observed at Beach and Williston on the 11th; t Williston on the 14th; at Beach, Bottineau, Ellendale, Fesenden, Foxholm, Grand Forks and Williston on the 17th; at Bottineau, Crosby, Foxholm, Grand Forks and Sharon on the 8th; at Devils Lake and Grand Forks on the 19th; at Arnegard, Beach, Devils Lake, Finley, Howard and Linton on the 3d; at Howard and Towner on the 24th, and at New England n the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXV Bismarck, N. D., March, 1926 No. 3

GENERAL SUMMARY

The month opened with conditions of weather nearly nor- al. Preparations for spring work on farms were begun dur- g the first decade, and during the second decade this activity as general, much seeding of spring wheat being accomplished central and western parts of the State. Low temperatures uring the latter part of the last decade delayed work in fields. onsiderable road work was done during the month, and at the ose highways were generally in excellent condition. Tame rasses were well started at the close of the month, and live- ock was generally in good condition.

TEMPERATURE

The mean temperature for the State was 25.8°, or 3.2° above e normal, and 1.6° lower than the mean for March, 1925. he highest mean reported was 33.2° at Ashley, McIntosh ounty; the lowest was 18.5° at Hansboro, Towner County. he highest temperature reported was 83° at Ashley, Mc- ntosh County, on the 22d; the lowest was −23° at Hansboro, owner County, on the 7th. The greatest monthly range of mperature was 93° at Ashley, McIntosh County; the least as 46° at Hettinger, Adams County. The greatest daily nge was 58° at Ashley, McIntosh County, on the 1st.

PRECIPITATION

The average precipitation for the State was 0.24 inch, or .59 inch below the normal, and 0.43 inch less than the verage for March, 1925. The greatest monthly amount re- orted was 1.27 inches at Powers Lake, Burke County; there as none at Hettinger, Adams County, and at Minot, Ward ounty. The greatest amount recorded in any 24 consecutive ours was 0.60 inch at McKinney, Renville County, on the 24th. he average number of days with 0.01 inch or more of precipi- tion was 3. The average snowfall was 1.8 inches.

AURORAS

Auroras were observed at Fessenden on the 4th; at Beach on e 5th; at Bottineau, Eckman, Fessenden, Foxholm and Wil- w City on the 9th; at Bottineau, Bowman, Foxholm, Grand orks and Linton on the 10th; at Bottineau, Foxholm and rand Forks on the 11th; at Bottineau and Grand Forks on e 12th; at Arnegard and Bottineau on the 13th; at Bottineau, oxholm and Howard on the 15th; at Bottineau, Fessenden, oxholm, Grand Forks, Sharon and Williston on the 17th; at oxholm, Grand Forks and Williston on the 18th; at Bismarck, ottineau, Crosby, Devils Lake, Ellendale, Fessenden, Fuller- on, Grand Forks, McClusky, Minto, Stanton, Williston and illow City on the 19th; at Bowman, Crosby, Dogden, Fox- olm and Grand Forks on the 20th; at Crosby on the 21st and 2d, and at Linton on the 26th and 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXV Bismarck, N. D., April, 1926 No. 4

GENERAL SUMMARY

The weather throughout the State during April was unusually ry, the average precipitation for the month being the lowest of ecord for April. There was more than the usual sunshine, nd vegetation made rapid growth. The weather was very favorable for spring work on farms, and rapid progress was made n seeding spring wheat, oats and barley, and much plowing or corn was accomplished, although at the close of the month ain was badly needed in many sections for grains, pastures, anges, meadows, and for plowing. An unusually large amount f road work was performed by contractors in all parts of the tate. At the close of the month livestock was generally in xcellent condition. A large number of severe prairie fires occurred in the central and west portions, causing much property oss, as well as the loss of several humans.

TEMPERATURE

The mean temperature for the State was 42.8°, or 1.1° above he normal, and 5.0° lower than the mean for April, 1925. he highest mean reported was 49.4° at Ashley, McIntosh ounty; the lowest was 36.5° at Larimore, Grand Forks County. he highest temperature reported was 98° at Ashley, McIntosh ounty, on the 15th and 30th; the lowest was -4° at Dickinson, tark County, on the 3d. The greatest monthly range of emperature was 97° at Ashley, McIntosh County; the least as 72° at Hillsboro, Traill County. The greatest daily ange was 72° at Amenia, Cass County, on the 15th.

PRECIPITATION

The average precipitation for the State was 0.28 inch, or .10 inches below the normal, and 1.36 inches less than the verage for April, 1925. The greatest monthly amount reorted was 1.56 inches at Powers Lake, Burke County; there as none at Fort Yates, Sioux County. The greatest amount ecorded in any 24 consecutive hours was 0.68 inch at Powers ake, Burke County, on the 2d. The average number of days ith 0.01 inch or more of precipitation was 3. The average nowfall was 0.9 inch, the greatest fall being 6.0 inches at Parhall, Mountrail County.

AURORAS

Auroras were observed at Linton on the 2d; at Arnegard, rosby, New England and Willow City on the 6th; at Bottieau, Bowman, Crosby, Foxholm, Grand Forks, New England nd Willow City on the 7th; at Bowman, Crosby, Foxholm, rand Forks and New England on the 8th; at Crosby, Foxholm nd McKinney on the 9th; at Crosby on the 10th, 11th and 2th; at Beach, Crosby and Foxholm on the 13th; at Arnegard, shley, Beach, Bismarck, Bottineau, Crosby, Dogden, Ellenale, Fessenden, Foxholm, Grand Forks, Howard, McClusky, elville, Minto, Napoleon, Stanton, Williston and Willow City n the 14th; at Beach, Bottineau, Bowman, Crosby, Dogden, essenden, Foxholm, Grand Forks, Howard, Lamoine, Sharon nd Towner on the 15th; at Bowman, Crosby, Dogden, Ellenale, Grand Forks and Towner on the 16th; at Fessenden and oward on the 17th, and at Foxholm on the 18th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXV BISMARCK, N. D., MAY, 1926 No. 5

GENERAL SUMMARY

The month opened with weather favorable for crops and outdoor work. Early seeded wheat was up to good stand and color at the opening of the month, and late sown seed was germinating. Showers occurred in all sections from the 6th to the 10th, inclusive, and scattered showers from the 16th to the 21st, inclusive. Plowing for corn made rapid progress during the first decade, and planting was general during the second and the early part of the third decades. Flax seeding was general during the last decade. Heavy to killing frosts occurred in all sections on the 3d, but slight damage resulted. Later frosts were generally light, and did practically no damage. Crops at the close of the month were from ten days to two weeks late, due to cool weather and generally deficient precipitation. Rain was needed in all parts of the State for crops, pastures, ranges and meadows.

TEMPERATURE

The mean temperature for the State was 58.5°, or 5.9° above the normal, and 4.9° higher than the mean for May, 1925. The highest mean reported was 66.6° at Mott, Hettinger County; the lowest was 53.5° at Howard, Williams County. The highest temperature reported was 105° at Edgeley, LaMoure County, on the 4th; the lowest was 10° at Grafton and Minto, Walsh County, on the 3d. The greatest monthly range of temperature was 90° at Edgeley, LaMoure County, and Minto, Walsh County; the least was 52° at Amidon, Slope County. The greatest daily range was 78° at Edgeley, LaMoure County, on the 4th.

PRECIPITATION

The average precipitation for the State was 2.18 inches, or 0.37 inch below the normal, and 0.74 inch more than the average for May, 1925. The greatest monthly amount reported was 4.02 inches at Mott, Hettinger County; the least was 0.43 inch at Towner, McHenry County. The greatest amount recorded in any 24 consecutive hours was 2.10 inches at Larimore, Grand Forks County, on the 25th. A trace of snow occurred at Hansboro, Towner County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Fullerton and New England on the 3d; at Dogden, Ellendale, Minto, New England, Williston and Moorhead on the 4th; at Bottineau and Fullerton on the 6th; at Bottineau, Fullerton and Grand Forks on the 9th; at Arnegard, Bottineau, Dogden, Fullerton, Grand Forks, Minto and Willow City on the 10th; at Fullerton on the 12th; at Bottineau, Fullerton and Willow City on the 14th; at Willow City on the 15th, 16th and 17th; at Ellendale on the 18th and 19th, and at Richardton on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXV BISMARCK, N. D., JUNE, 1926 No. 6

GENERAL SUMMARY

Taken as a whole, the weather conditions throughout the State were somewhat unfavorable. The distribution of precipitation was uneven, both geographically and throughout the month. Very little precipitation occurred during the first decade, general moderate to heavy rains occurred during the second decade, and only light precipitation during the third decade. Due to drought, both spring wheat and winter rye headed short. Up to the close of the month corn was generally excellent, and mostly clean. Ranges, pastures and meadows were badly in need of rain at the close of the month.

TEMPERATURE

The mean temperature for the State was 60.7°, or 2.1° below the normal, and 0.8° lower than the mean for June, 1925. The highest mean reported was 70.5° at Hettinger, Adams County; the lowest was 54.0° at Pembina, Pembina County. The highest temperature reported was 104° at Napoleon, Logan County, on the 27th, and at Edgeley, LaMoure County, on the 28th; the lowest was 22° at Pembina, Pembina County, on the 18th. The greatest monthly range of temperature was 77° at Napoleon, Logan County; the least was 50° at Grafton, Walsh County. The greatest daily range was 62° at Lamoine, Kidder County, on the 27th.

PRECIPITATION

The average precipitation for the State was 2.65 inches, or 0.85 inch below the normal, and 3.42 inches less than the average for June, 1925. The greatest monthly amount reported was 5.66 inches at Mayville, Traill County; the least was 0.66 inch at Edgeley, LaMoure County. The greatest amount recorded in any 24 consecutive hours was 3.10 inches at Pembina, Pembina County, on the 21st. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS

Auroras were observed at Arnegard, Bottineau, Foxholm, Grand Forks and Willow City on the 1st; at Ellendale, Foxholm, McLeod, New England and Willow City on the 2d; at Williston on the 6th; at Devils Lake, Fessenden, Foxholm, Fullerton, McClusky, Mott and New England on the 7th; at Bismarck, Bowman, Devils Lake, Ellendale, Foxholm, Fullerton, McClusky, Moorhead and Valley City on the 8th; at Howard on the 12th; at Willow City on the 18th, and at Howard on the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for June, 1926

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXV   Bismarck, N. D., July, 1926   No. 7

GENERAL SUMMARY

Taking the State as a whole, the weather conditions for the onth were somewhat unfavorable. The temperature averaged early three degrees above the normal, and while the precipiation only averaged 0.61 inch below the normal, the distribuion of rainfall was uneven geographically, and as a result of hese adverse conditions crops suffered from drought in many arts of the State. Dry weather with temperature above the ormal prevailed at the opening of the month, and not until he 8th did appreciable rainfall occur, showers being general n the 8th and 9th. Dry weather again prevailed until the 9th but with lower temperature, the minimum for the month eing usually recorded on the 12th. From the 19th to the 22d, nclusive, scattered showers occurred, and again on the 28th nd 29th showers occurred in many parts of the State. Crops eteriorated considerably in the central and western parts of he State, and practically all parts were in need of rain at the lose of the month.

TEMPERATURE

The mean temperature for the State was 70.3°, or 2.8° above he normal, and 3.6° higher than the mean for July, 1925. he highest mean reported was 78.8° at Hettinger, Adams ounty; the lowest was 64.8° at Hansboro, Towner County. he highest temperature reported was 108° at Ashley, Mcntosh County, and at Lisbon, Ransom County, on the 18th; he lowest was 32° at Hansboro, Towner County, on the 12th. he greatest monthly range of temperature was 70° at Hansoro, Towner County; the least was 45° at Mott, Hettinger ounty. The greatest daily range was 59° at Lisbon, Ransom ounty, on the 18th.

PRECIPITATION

The average precipitation for the State was 2.00 inches, or .61 inch below the normal, and 0.66 inch more than the verage for July, 1925. The greatest monthly amount reorted was 5.10 inches at Amenia, Cass County; the least as 0.31 inch at Foxholm, Ward County. The greatest mount recorded in any 24 consecutive hours was 3.40 inches t Hettinger, Adams County, on the 26th. The average umber of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Grand Forks on the 1st; at Willow ity on the 5th; at Valley City on the 6th; at Sharon on the 0th; at Devils Lake on the 18th; at Bottineau, Devils Lake, llendale, Foxholm, New England and Williston on the 27th; t Dogden, Ellendale and Towner on the 28th; at Arnegard, rand Forks and McClusky on the 30th, and at Bottineau, llendale, Foxholm and Williston on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for July, 1926

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXV   BISMARCK, N. D., AUGUST, 1926   No. 8

GENERAL SUMMARY

The month opened with a general lack of soil moisture. Light to heavy local showers occurred in some parts of the State, but harvesting and early threshing made good progress during the first half of the month. From the 17th to the 20th showers were general in the greater portion of the State, delaying harvesting of flax and threshing, but greatly improving fall plowing conditions and pastures and ranges. From the 21st to the 29th fair weather generally prevailed, and rapid progress was made in all kinds of farm work. Heavy local showers occurred in some parts of the State on the 30th.

TEMPERATURE

The mean temperature for the State was 65.6°, or 0.2° above the normal, and 2.3° lower than the mean for August, 1925. The highest mean reported was 74.2° at Hettinger, Adams County; the lowest was 58.9° at Hansboro, Towner County. The highest temperature reported was 105° at Beach, Golden Valley County, on the 26th; the lowest was 36° at Epping, Williams County, on the 15th, and at Amidon, Slope County, and at Willow City, Bottineau County, on the 29th. The greatest monthly range of temperature was 63° at Amenia, Cass County, and at Dickinson, Stark County; the least was 45° at Hettinger, Adams County. The greatest daily range was 55° at Amenia, Cass County, on the 25th.

PRECIPITATION

The average precipitation for the State was 2.43 inches, or 0.15 inch above the normal, and 1.36 inches more than the average for August, 1925. The greatest monthly amount reported was 9.76 inches at Ellendale, Dickey County; the least was 0.80 inch at Cooperstown, Griggs County, and at Williston, Williams County. The greatest amount recorded in any 24 consecutive hours was 5.58 inches at Ellendale, Dickey County, on the 30th. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS

Auroras were observed at Dogden on the 1st; at Foxholm on the 12th; at Ellendale on the 13th; at Bottineau on the 15th; at Foxholm and Willow City on the 16th; at Bottineau and Willow City on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for August, 1926

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXV   Bismarck, N. D., September, 1926   No. 9

GENERAL SUMMARY

The month opened with cloudy and stormy weather, a condition which prevailed throughout the greater portion of the first sixteen days. During this period threshing of all grains and harvesting of flax made little progress. There was much fall plowing and seeding of winter rye accomplished, the ample precipitation placing the soil in excellent condition for this work. From the 17th to the 20th the weather was generally fair, but before threshing became general rains occurred, the period 20th to 24th producing general precipitation. The weather from the 25th to the 29th was fair, and much farm and other outdoor work was accomplished. A general rain occurred on the last day of the month.

TEMPERATURE

The mean temperature for the State was 52.3°, or 4.1° below the normal, and 5.8° lower than the mean for September, 1925. The highest mean reported was 63.6° at Hettinger, Adams County; the lowest was 48.6° at Dunseith, Rolette County, and Jamestown, Stutsman County. The highest temperature reported was 95° at Lamoine, Kidder County, on the 16th, and at Mayville, Traill County, on the 1st; the lowest was 9° at Crosby, Divide County, on the 24th. The greatest monthly range of temperature was 84° at Carson, Grant County; the least was 60° at Larimore, Grand Forks County. The greatest daily range was 60° at Lamoine, Kidder County, on the 16th.

PRECIPITATION

The average precipitation for the State was 2.42 inches, or 0.78 inch above the normal, and 0.32 inch less than the average for September, 1925. The greatest monthly amount reported was 5.00 inches at Pembina, Pembina County; the least was 0.39 inch at Hettinger, Adams County. The greatest amount recorded in any 24 consecutive hours was 2.39 inches at Fort Yates, Sioux County, on the 2d. Snow, ranging in amount from a trace to 8.0 inches, occurred, the greater portion occurring in the northwest part of the State, the average fall for the Section being 0.5 inch. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS

Auroras were observed at Melville on the 6th; at Bismarck, Dogden, Ellendale, Foxholm, Marmarth, New England and Willow City on the 8th; at Bottineau, Ellendale and New England on the 9th; at Ellendale and Foxholm on the 15th; at Devils Lake, Ellendale, Foxholm, McClusky and Towner on the 16th; at Bottineau and Towner on the 17th; at Sharon on the 19th, and at Minto on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXV Bismarck, N. D., October, 1926 No. 10

GENERAL SUMMARY

The month opened with showery weather, which delayed the harvesting of late flax and threshing, but fall plowing and the seeding of winter wheat generally made excellent progress during the first and second decades. The third decade opened with general showers, which delayed farm work somewhat, but on the whole fair progress was made. At the close of the month most of the threshing was accomplished, and seeding of winter rye completed. Livestock ranged generally on pastures and harvested fields, thus saving much feed. More than the usual road construction was accomplished.

TEMPERATURE

The mean temperature for the State was 42.6°, or 1.2° below the normal, and 9.3° higher than the mean for October, 1925. The highest mean reported was 47.6° at Hettinger, Adams County, and at New England, Hettinger County; the lowest was 36.4° at Lisbon, Ransom County. The highest temperature reported was 85° at Beach, Golden Valley County, on the 6th; the lowest was 4° at Hansboro, Towner County, on the 24th. The greatest monthly range of temperature was 77° at Beach, Golden Valley County; the least was 45° at Grafton, Walsh County. The greatest daily range was 51° at Hettinger, Adams County, on the 18th.

PRECIPITATION

The average precipitation for the State was 1.49 inches, or 0.49 inch above the normal, and 0.71 inch more than the average for October, 1925. The greatest monthly amount reported was 5.06 inches at Larimore, Grand Forks County; there were but traces at Lamoine, Kidder County; Marmarth, Slope County, and New England, Hettinger County. The greatest amount recorded in any 24 consecutive hours was 3.14 inches at McLeod, Ransom County, on the 4th. The average snowfall was 1.0 inch; the greatest fall reported being 8.2 inches at Grand Forks, Grand Forks County. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Arnegard and Foxholm on the 2d; at Bottineau, McClusky and Williston on the 3d; at Williston on the 4th and 5th; at Bottineau, Foxholm and McLeod on the 6th; at Bottineau, Devils Lake and Foxholm on the 7th; at Foxholm on the 11th; at Dogden and Minto on the 12th; at Foxholm and McClusky on the 13th; at Arnegard, Ashley, Bismarck, Devils Lake, Ellendale, Foxholm, McClusky, Metigoshe, Valley City, Williston and Willow City on the 14th; at Ashley, Bottineau, Minto, New England, Sharon and Towner on the 15th, and at Ashley on the 16th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for October, 1926

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXV   Bismarck, N. D., November, 1926   No. 11

GENERAL SUMMARY

The month opened with generally fair weather and mild emperature, a condition that prevailed throughout the greater part of the first decade. During this period rapid progress was nade in fall plowing and the completion of late seeding of win-er rye. Nearly normal temperature prevailed during the second decade, and corn husking made good progress. During he first and second decades livestock ranged freely upon pas-ures, ranges and harvested fields. The third decade was cold nd more or less stormy, necessitating considerable yard feed-ng of livestock, and stopping most outdoor farm work.

TEMPERATURE

The mean temperature for the State was 21.5°, or 5.1° below he normal, and 7.3° lower than the mean for November, 1925. The highest mean reported was 31.6° at Carson, Grant County; the lowest was 12.8° at Hansboro, Towner County. The highest temperature reported was 68° at Hettinger, Adams County, on the 5th, and at Minot, Ward County, on the 6th; he lowest was −23° at Valley City, Barnes County, on the 26th. The greatest monthly range of temperature was 79° at Hettin-er, Adams County; the least was 40° at Powers Lake, Burke County. The greatest daily range was 47° at Dickinson, Stark County, on the 29th; at Hettinger, Adams County, on the 1st, nd at Valley City, Barnes County, on the 23d.

PRECIPITATION

The average precipitation for the State was 0.65 inch, or .07 inch above the normal, and 0.40 inch more than the verage for November, 1925. The greatest monthly amount re-orted was 2.00 inches at Larimore, Grand Forks County; there was but a trace at Lisbon, Adams County. The average snow-all was 6.2 inches. The average number of days with 0.01 nch or more of precipitation was 5.

AURORAS

Auroras were observed at Linton on the 20th; at Devils Lake n the 25th; at Arnegard, Beach, Carson, Ellendale, Grand Forks, Sharon, Trotters and Williston on the 28th, and at Williston on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

VOL. XXXV BISMARCK, N. D., DECEMBER, 1926 No. 12

GENERAL SUMMARY

Changeable temperature characterized the weather during December, 1926. A cold wave accompanied by continued high wind prevailed from the 13th to 17th, inclusive, and caused great suffering to livestock and delayed railway and highway traffic. During the greater part of the month livestock ranged freely on ranges and harvested fields, and only during the period before mentioned was there much yard feeding done. A general storm covered the State on the 3d and 4th, while light to moderate scattered snowfall occurred on the 11th and 12th, and 22d and 23d.

TEMPERATURE

The mean temperature for the State was 9.2°, or 3.8° below the normal, and 7.3° lower than the mean for December, 1925. The highest mean reported was 16.8° at Amidon, Slope County; the lowest was 3.6° at Langdon, Cavalier County. The highest temperature reported was 55° at Grafton, Walsh County, on the 29th; the lowest was -36° at Dunseith, Rolette County, on the 14th. The greatest monthly range of temperature was 80° at Grafton, Walsh County; the least was 57° at Ellendale, Dicky County, and at Hillsboro, Traill County. The greatest daily range was 69° at Grafton, Walsh County, on the 29th.

PRECIPITATION

The average precipitation for the State was 0.57 inch, or 0.03 inch above the normal, and 0.29 inch more than the average for December, 1925. The greatest monthly amount reported was 1.50 inches at Fort Yates, Sioux County; the least was 0.10 inch at Maddock, Benson County. The greatest amount recorded in any 24 consecutive hours was 1.00 inch at Ashley, McIntosh County, on the 4th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 4.5 inches; the greatest fall reported being 15.0 inches at Fort Yates, Sioux County.

AURORAS

Auroras were observed at Grand Forks, on the 3d and 11th; at Metigoshe on the 12th; at McLeod on the 22d, and at Foxholm on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

ORRIS W. ROBERTS, Meteorologist

Vol. XXXV Bismarck, N. D., Annual, 1926 No. 13

GENERAL SUMMARY

The year 1926 opened with conditions very similar to those which characterized the opening of 1925. The weather was unusually mild, the temperature being decidedly above the normal, there was more than the normal sunshine, the wind movement was moderate, the precipitation was deficient, and there were no severe storms. The weather and soil conditions at the opening of spring work on farms were excellent in practically all parts of the State. There was, however, a deficiency in precipitation during the first three months, and a still greater deficiency during April. Although all other conditions were favorable for crops, precipitation continued deficient during May, June and July, and as a result of such deficiencies there was a severe deterioration in crops in the central and western parts of the State. Late summer and fall rainfall was generally ample for fall plowing and feed, and generally livestock went into winter in good condition.

The mean temperature for the State was 40.7°, or 1.9° above the normal, and 0.1° higher than the mean for 1925. The highest mean annual temperature reported was 45.1° at Hettinger, Adams County; the lowest was 35.2° at Hansboro, Towner County. The highest temperature reported was 108° at Ashley, McIntosh County, and at Lisbon, Ransom County, on July 18th; the lowest was -36° at Dunseith, Rollette County, on December 14th.

The average annual precipitation for the State was 15.70 inches, or 2.24 inches below the normal, and 1.11 inches less than the average for 1925. The greatest annual precipitation reported was 21.78 inches at Larimore, Grand Forks County; the least was 10.01 inches at Beach, Golden Valley County. The greatest monthly amount reported was 9.76 inches at Ellendale, Dickey Conuty, in August; stations reporting none were Hansboro, Towner County, in January; Hettinger, Adams County, and Minot, Ward County, in March, and Fort Yates, Sioux County, in August. The precipitation averaged below the normal from January to July, inclusive, and above the normal from August to December, inclusive. The average snowfall for the State was 22.7 inches. The average number of days with 0.01 inch or more of precipitation was 68. There were 151 clear days, 105 partly cloudy days and 109 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

January.—Mild and pleasant weather prevailed throughout the State. Only light scattered precipitation occurred, allowing outdoor work to proceed without interuption; the temperature was the highest of record since the climatological service was established in 1892. Ice harvest was completed and much highway construction was accomplished. Livestock ranged freely on pastures, ranges and harvested fields, thus saving much feed, and at the close of the month range cattle and horses were in excellent condition.

February.—Unusually mild temperature, deficient precipitation, more than the average sunshine, and an absence of bad storms made the weather during the month one of the most enjoyable of record in the climatological history of the State. As a result of these favorable conditions outdoor work continued uninterruptedly throughout the month, the wagon roads were open in all sections and livestock ranged freely.

March.—Nearly normal conditions prevailed at the opening of the month. Preparations for spring work on farms made good headway during the first decade, and during the second decade this activity was general, much seeding of spring wheat being accomplished in the central and western portions of the State. Tame grasses were well started, affording much feed for livestock, which was in good condition generally.

April.—Unusually dry weather prevailed during the month, the average precipitation for the State being the lowest of record for April. There was more than the usual sunshine, and vegetation made rapid growth. The weather was favorable for work on farms and rapid progress was made in seeding spring wheat, oats and barley, and much plowing for corn was accomplished. An exceptionally large volume of road construction was done throughout the State. At the close of the month livestock was in excellent condition. A large number of destructive prairie fires occurred in the central and western portions of the State, causing much property damage, and the loss of several human lives.

May.—The month opened with weather favorable for crops and outdoor work. Early seeded grain was up to good stand and color, and late sown seed was germinating. Light to moderate showers occurred in practically all sections from the 6th to the 10th, inclusive, and scattered showers from the 16th to the 21st, inclusive. Plowing for corn made rapid progress during the first decade and planting was general during the second and early part of the third decade. Flax seeding was general during the last decade. Rain was generally needed in all sections of the State at the close of the month, and crops were in most sections somewhat backward.

June.—Taken as a whole, the weather conditions throughout the State were somewhat unfavorable. The distribution of precipitation was uneven, both geographically and throughout the month. Very little precipitation occurred during the first decade, only moderate rains occurred during the second decade, and light precipitation during the third decade. Although corn appeared in excellent condition at the close of the month, small grains generally deteriorated, spring wheat and rye heading short.

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. ^{a}, 1 day missing, ^{b}, 2 days missing, etc.

[Continued from page [illegible]]

JULY.—Generally weather conditions throughout the State were somewhat unfavorable. The temperature averaged three degrees above the normal, and, while the precipitation only averaged 0.61 inch below the normal, the distribution was uneven geographically. As a result of these adverse conditions crops suffered in many parts of the State from drought, and pastures, ranges and meadows suffered accordingly, particularly in the central and western portions of the section.

AUGUST.—The month opened with a general lack of moisture in the soil. Light to heavy local showers relieved this condition in some sections, but generally more rain was needed. Harvesting and early threshing made good progress during the first half of the month, being delayed more or less by showers during the last half. From the 17th to the 20th, inclusive, showers were general and greatly benefitted pastures and ranges, and improved conditions for fall plowing.

SEPTEMBER.—The month opened with cloudy and stormy weather, a condition which prevailed throughout the first half of the month. During this period threshing of grains and the harvesting of flax made small progress. Rains from the 20th to 24th, inclusive, improved conditions for fall plowing, and much seeding of winter rye was accomplished.

OCTOBER.—Showery weather characterized the opening of the month, which delayed threshing and the harvesting of late flax, but fall plowing and seeding of winter rye made excellent progress during the first and second decades. The third decade opened with general showers, which delayed farm work somewhat, but on the whole fair progress was made. Livestock ranged freely on pastures, ranges and harvested fields throughout the month and was in excellent condition. More than the usual volume of road work was accomplished.

NOVEMBER.—Generally fair weather and mild temperature prevailed during the first decade, and during this period rapid progress was made in fall plowing and late seeding of winter rye. Nearly normal temperature prevailed during the second decade and much corn husking was done. During the first and second decades livestock ranged freely, saving much feed. The third decade was cold and stormy, effectively stopping most outdoor work, and necessitating much yard feeding of livestock.

DECEMBER.—Changeable temperature characterized the weather during the month. A cold wave accompanied by continued high wind prevailed from the 13th to the 17th, inclusive, and caused great suffering to live-stock and delayed railway and highway traffic. During the greater part of the month live-stock ranged freely on ranges and harvested fields, and only during the cold period was much yard feeding done. A general storm covered the State on the 3d and 4th, while light to moderate scattered snowfall occurred on the 11-12th and 22-23d.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., JANUARY, 1927 No. 1

GENERAL SUMMARY

Mild and pleasant weather characterized the opening of the the month, a condition that prevailed during the first six days. General snows occurred on the 7th and 8th, with scattered snows ot the 9th. Mostly fair weather prevailed from the 10th to the 15th, inclusive. Snow was general from the 16th to the 20th, clearing on the 21st and remaining pleasant until the 29th, when scattered snows again occurred, continuing to the close of the month. Taken as a whole, the weather of the month was favorable for outdoor work and for livestock. Ice harvesting made excellent progress and was practically completed at the close. With the exception of some old and crippled horses, the loss of livestock was comparatively light. The snow covering was generally ample for winter rye.

TEMPERATURE

The mean temperature for the State was 10.1°, or 5.2° above the normal, and 6.2° lower than the mean for January, 1925. The highest mean reported was 21.6° at Hettinger, Adams County; the lowest was -0.8° at Dunseith, Rolette County. The highest temperature reported was 60° at Valley City, Barnes County, on the 8th; the lowest was -44° at Hansboro, Towner County, on the 24th. The greatest monthly range of temperature was 86° at Hansboro, Towner County. The greatest daily range was 55° at Steele, Kidder County on the 29th.

PRECIPITATION

The average precipitation for the State was 0.41 inch, or 0.13 inch below the normal, and 0.03 inch more than the average for January, 1926. The greatest monthly amount reported was 1.24 inches at Lisbon, Ransom County; there was none at Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Lisbon, Ransom County, on the 30th. The average snowfall was 4.8 inches. The average number of days with 0.01 inch or more of precipitation was 4.

AURORAS

Auroras were observed at Linton, Trotters and Willow City on the 1st; at Foxholm on the 2d; at Bottineau and Foxholm on the 3d; at Devils Lake and Foxholm on the 4th; at Foxholm on the 6th and 10th; at Willow City on the 24th; at Arnegard, Bottineau, Eckman, Foxholm, Sharon, Stanton, Willow City, and Moorhead (Minn.) on the 25th; at Napoleon and Towner on the 26th, and at Howard on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVI Bismarck, N. D., February, 1927 No. 2

GENERAL SUMMARY

The month opened with mild temperature, a condition which prevailed throughout the first week, and during this period light scattered precipitation occurred, being quite general on the 5th. The second week was colder, with minimum temperatures near or below zero. The last half of the month was mild with but little precipitation during the last week. Livestock ranged freely during the greater part of the month thus saving much feed, which was scarce. Main trails were open generally but crossroads in many places were impassable except for teams.

TEMPERATURE

The mean temperature for the State was 13.3°, or 5.4° above the normal, and 9.0° lower than the mean for February, 1926. The highest mean reported was 20.7° at Amidon, Slope County; the lowest was 6.1° at Westhope, Bottineau County. The highest temperature reported was 50° at Amidon, Slope County, on the 20th; the lowest was -31° at Willow City, Bottineau County, on the 9th. The greatest monthly range of temperature was 78° at Willow City, Bottineau County; the least was 55° at Grand Forks, Grand Forks County, and at Sharon, Steele County. The greatest daily range was 57° at Lisbon, Ransom County, on the 21st.

PRECIPITATION

The average precipitation for the State was 0.36 inch, or 0.13 inch below the normal, and 0.05 inch less than the average for February, 1926. The greatest monthly amount reported was 1.51 inches at Linton, Emmons County; there was none at Pembina, Pembina County, and at Stanton, Mercer County. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Linton, Emmons County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 3.1 inches.

AURORAS

Auroras were observed at Linton on the 1st; at Foxholm on the 3d; at Towner on the 10th; at Epping on the 21st; at McLeod on the 22d; at Crosby, Devils Lake, Foxholm, Hansboro, McKinney, McLeod, and Parshall on the 23d; at Bottineau, Devils Lake, Foxholm, Fullerton, Hansboro, Larimore, McClusky, McKinney, McLeod, Metigoshe, Parshall, Towner and Trotters, on the 24th; at Crosby, Howard, Napoleon and Parshall on the 25th, and at Foxholm on the 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for February, 1927

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., MARCH, 1927 No. 3

GENERAL SUMMARY

Taken as a whole the weather of the month was favorable for livestock and for outdoor work. The mild temperature and absence of severe storms allowed livestock to range freely on ranges and harvested fields, thus saving much feed. As rough feed was scarce, these conditions proved a great boon to many farmers and stockmen. Practically no field work was done on farms, due to frozen ground and snow in some sections. Main highways were passable throughout the month, but were rough in some sections. Crossroads were blocked by snows in eastern portion during parts of the month.

TEMPERATURE

The mean temperature for the State was 30.4°, or 7.8° above the normal, and 4.6° higher than the mean for March, 1926. The highest mean reported was 33.6° at Fullerton, Dickey County; the lowest was 24.0° at Hansboro, Towner County. The highest temperature reported was 77° at Carson, Grant County, on the 14th; the lowest was -10° at McKinney, Renville County, on the 2d. The greatest monthly range of temperature was 71° at Carson, Grant County; the least was 41° at Granville, McHenry County. The greatest daily range was 53° at Hettinger, Adams County, on the 10th.

PRECIPITATION

The average precipitation for the State was 0.74 inch, or 0.09 inch below the normal, and 0.50 inch more than the average for March, 1926. The greatest monthly amount reported was 2.26 inches at Fullerton, Dickey County; there was none at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 0.98 inch at Moorhead, on the 25th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 6.5 inches.

AURORAS

Auroras were observed at Arnegard, Beach, Foxholm, Grand Forks, Howard, Towner and Velva on the 6th; at Crosby and Towner on the 7th; at Bottineau and Crosby on the 8th; at Arnegard, Dogden Butte, Foxholm, Howard, Williston and Willow City on the 9th; at Crosby on the 11th and 12th; at Crosby, McKinney and McLeod on the 13th; at Parshall on the 14th; at Devils Lake, Foxholm and Parshall on the 15th; at Sharon on the 16th; at Parshall on the 19th; at Beach, Howard, McKinney and Sharon on the 25th; at Foxholm and Parshall on the 26th; at Arnegard, Beach, Bismarck, Ellendale, Howard, New Salem, Parshall and Velva on the 27th; at Ellendale and Howard on the 28th, and at Grand Forks and Willow City on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., APRIL, 1927 No. 4

GENERAL SUMMARY

The month opened with weather generally favorable for spring work on farms, and with the exception of some delay caused by quite general showers on the 4th, farm work made good progress during the first week. Showers were general again over the State on the 9th and 10th, greatly delaying spring seeding, especially in the eastern portion. Drying weather prevailed from the 11th to the 14th inclusive, but was followed on the 15-16th by quite general heavy rain. Farm work made excellent progress throughout the last decade, and seeding was well advanced at the close of the month. Wild and tame grasses made rapid growth and afforded much feed for livestock, which was in fair to good condition. Much highway construction was under way during the last decade.

TEMPERATURE

The mean temperature for the State was 41.4°, or 0.3° below the normal, and 1.4° lower than the mean for April, 1926. The highest mean reported was 46.4° at McLeod, Ransom County; the lowest was 36.2° at Granville, McHenry County. The highest temperature reported was 95° at Hettinger, Adams County, on the 26th; the lowest was 7° at Hansboro, Towner County, on the 7th, and at Hettinger, Adams County, on the 19th. The greatest monthly range of temperature was 88° at Hettinger, Adams County; the least was 44° at Powers Lake, Burke County. The greatest daily range was 65° at Hettinger, Adams County, on the 19th.

PRECIPITATION

The average precipitation for the State was 1.70 inches, or 0.32 inch above the normal, and 1.42 inches more than the average for April, 1926. The greatest monthly amount reported was 2.95 inches at Fullerton, Dickey County; the least was 0.41 inch at Dunseith, Rolette County. The greatest amount recorded in any 24 consecutive hours was 1.26 inches at Fullerton, Dickey County, on the 15th. The average number of days with 0.01 inch or more of precipitation was 7. The average snowfall was 2.3 inches, the greatest fall being 12.0 inches at Hettinger, Adams County.

AURORAS

Auroras were observed at Trotters and Willow City on the 2d; at Beach and Foxholm on the 5th; at Minot on the 7th; at Sharon on the 20th; at Arnegard, Bottineau, Ellendale, McClusky, Sharon, Stanton and Towner on the 23d; at Foxholm, Howard and Stanton on the 24th; at Crosby, Howard and Richardton on the 28th; at Crosby, McLeod and Sharon on the 29th, and at Bottineau, Crosby, Foxholm and Howard on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for April, 1927

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., MAY, 1927 No. 5

GENERAL SUMMARY

Unusually favorable weather for crops prevailed throughout the State during the month. Quite often when the Red River valley receives just the proper amount of rainfall, the central and western portions receive too little. During the present season, however, generally the largest amounts were recorded in the central portion. The average precipitation for the State was the highest of record for May in the climatological history of the Section. Due to the low average temperature, small grains stooled well and were in excellent condition at the close of the month. Pastures, ranges and meadows were also excellent, affording ample feed for livestock and insuring an excellent hay crop.

TEMPERATURE

The mean temperature for the State was 48.0°, or 4.6° below the normal, and 10.5° lower than the mean for May, 1926. The highest mean reported was 53.2° at Wahpeton, Richland County; the lowest was 43.2° at Granville, McHenry County, and at Powers Lake, Burke County. The highest temperature reported was 87° at New England, Hettinger County, on the 1st; the lowest was 13° at Westhope, Bottineau County on the 6th. The greatest monthly range of temperature was 68° at Beach, Golden Valley County; the least was 32° at Powers Lake, Burke County. The greatest daily range was 63° at New England, Hettinger County, on the 16th.

PRECIPITATION

The average precipitation for the State was 5.62 inches, or 3.07 inches above the normal, and 3.44 inches more than the average for May, 1926. The greatest monthly amount reported was 9.30 inches at Pembina, Pembina County; the least was 2.60 inches at Wahpeton, Richland County. The greatest amount recorded in any 24 consecutive hours was 3.32 inches at Richardton, Stark County, on the 8th. The average number of days with 0.01 inch or more of precipitation was 14. The average snowfall for the month was 3.2 inches, the greatest amount reported being 24.0 inches at Howard, Williams County.

AURORAS

Auroras were observed at Crosby and Dogden Butte on the 1st; at McLeod on the 2d; at Arnegard, Berthold Agency, Mandan and Williston on the 4th; at McLeod and Williston on the 5th; at Crosby on the 26th, and at Williston on the 30th

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for May, 1927

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., JUNE, 1927 No. 6

GENERAL SUMMARY

Taken as a whole the weather throughout North Dakota during June was favorable for crops and for all kinds of outdoor activities. There was more than the usual sunshine, but a deficiency in both temperature and precipitation. The rainfall, however, was ample for all crop needs, and was fairly well distributed both geographically and throughout the month. There were several hail storms of a damaging nature, and a severe wind storm at the close of the month resulted in considerable loss of property and the loss of at least one life in the central portion of the State. At the close of the month prospects for small grain crops were never better. Corn, though somewhat backward, was generally of good stand and color. Pastures, meadows and ranges afforded excellent feed, and livestock was in fine condition.

TEMPERATURE

The mean temperature for the State was 61.2°, or 1.6° below the normal, and 0.5° higher than the mean for June, 1926. The highest mean reported was 65.3° at Powers Lake, Burke County; the lowest was 52.5° at Granville, McHenry County. The highest temperature reported was 99° at Pembina, Pembina County, on the 27th; the lowest was 22° at Hansboro, Towner County, on the 11th. The greatest monthly range of temperature was 73° at Pembina, Pembina County; the least was 58° at Granville, McHenry County. The greatest daily range was 49° at Pembina, Pembina County, on the 5th.

PRECIPITATION

The average precipitation for the State was 2.84 inches, or 0.66 inch below the normal, and 0.19 inch more than the average for June, 1926. The greatest monthly amount reported was 6.69 inches at Edgeley, LaMoure County; the least was 1.03 inches at Willow City, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 3.31 inches at Edgeley, LaMoure County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS

Auroras were observed at Arnegard, Foxholm and McClusky on the 4th; at Velva on the 5th, and at Howard on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI   BISMARCK, N. D., JULY, 1927   No. 7

GENERAL SUMMARY

Taken as a whole, the weather during the month was the most favorable of any July for several years. The temperature was below normal and was especially favorable for small grains of all kinds. The precipitation was above the normal, and was quite well distributed, both geographically and throughout the month. Although the night temperatures were rather too cool for corn, that crop made good progress and at the close of the month was nearly of normal growth, much being in the tasseled stage. Much rye harvesting was done, especially during the last decade, and some harvesting of early sown spring wheat and barley. Reports of black stem rust in spring wheat were received but due to the advanced stage of that crop no serious damage was expected. At the close of the month pastures, ranges and meadows were excellent, and livestock generally in good condition.

TEMPERATURE

The mean temperature for the State was 65.4°, or 2.1° below the normal, and 4.9° lower than the mean for July, 1926. The highest mean reported was 68.2° at Hillsboro, Traill County, and at McLeod, Ransom County; the lowest was 61.2° at Granville, McHenry County. The highest temperature reported was 97° at Hettinger, Adams County, on the 27th; the lowest was 28° at New England, Hettinger County, on the 2d. The greatest monthly range of temperature was 67° at New England, Hettinger County; the least was 41° at Bottineau, Bottineau County. The greatest daily range was 54° at New England, Hettinger County, on the 7th.

PRECIPITATION

The average precipitation for the State was 2.85 inches, or 0.24 inch above the normal, and 0.85 inch more than the average for July, 1926. The greatest monthly amount reported was 6.99 inches at Dunn Center, Dunn County; the least was 0.70 inch at Mayville, Traill County. The greatest amount recorded in any 24 consecutive hours was 3.43 inches at Dunn Center, Dunn County, on the 23d. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS

Auroras were observed at Foxholm on the 7th; at Towner and Trotters on the 8th; at Beach, Bismarck, Ellendale, Foxholm, Howard, Sharon and Velva on the 21st; at Ashley, Crosby, Ellendale and McClusky on the 22d; at Howard on the 23d; at Beach, Bismarck, Crosby and Devils Lake on the 24th; at Crosby and McCleod on the 25th; at Foxholm on the 26th, and at Foxholm and McCleod on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVI   Bismarck, N. D., August, 1927   No. 8

GENERAL SUMMARY

Taken as a whole the weather during the month was favorable for all crops and for harvesting and threshing. The temperature averaged below normal and the nights were somewhat too cool for corn, especially during the first decade and from the 18th to the 24th. Frost on the 23d did some crop damage in the northern part of the State. The precipitation was above normal in all sections except in parts of the extreme western and extreme southeastern counties where it was slightly below average. August is the 4th month since April that the precipitation averaged above normal; June being the only month below normal. The precipitation was quite well distributed throughout the month but with the greatest amounts from the 15th to the 17th and from the 26th to the end of the month. This interfered somewhat with harvesting and threshing. Black stem rust damaged late spring wheat in some sections but the early planted was too far advanced when the rust appeared. Oats showed the greatest damage from rust. F. J. B.

TEMPERATURE

The mean temperature for the State was 63.4°, or 2.0° below the normal, and 2.2° lower than the mean for August, 1926. The highest mean reported was 67.6° at Wilton, McLean County; the lowest was 55.2° at Powers Lake, Burke County. The highest temperature reported was 96° at New Salem, Morton County, on the 5th; the lowest was 28° at Dunseith, Rolette County, on the 9th and 23d. The greatest monthly range of temperature was 65° at Hansboro, Towner County; the least was 46° at Dogden Butte, McLean County. The greatest daily range was 53° at New England, Hettinger County, on the 3d.

PRECIPITATION

The average precipitation for the State was 3.23 inches, or 0.95 inch above the normal, and 0.80 inch more than the average for August, 1926. The greatest monthly amount reported was 6.60 inches at Pembina, Pembina County; the least was 1.25 inches at Amidon, Slope County and at Dunn Center, Dunn County. The greatest amount recorded in any 24 consecutive hours was 3.72 inches at Grand Forks, Grand Forks County, on the 15-16th. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS

Auroras were observed at Crosby, Foxholm and Powers Lake on the 1st; at Arnegard, Crosby, Ellendale, Foxholm, Grand Forks and Velva on the 2d; at Towner on the 3d; at Crosby on the 4th; at Williston on the 8th and 9th; at Velva on the 15th and 18th; at Carson, Fessenden, Foxholm, Grand Forks and Westhope on the 19th; at Carson, Crosby, Ellendale, Fessenden, Foxholm, McClusky and Sharon on the 20th; at Foxholm and Towner on the 21st; at Bismarck, Carson, Ellendale, Foxholm, Fullerton, Grand Forks, Howard, Williston and Willow City on the 28th; at Sharon, Towner and Williston on the 29th; at Foxholm on the 30th, and at Bismarck and McClusky on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVI   Bismarck, N. D., September, 1927   No. 9

THE LIBRARY OF THE
NOV 7 1927
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

Taken as a whole the weather during the month was favorable for outdoor work, maturing of crops and for livestock. The first killing frost of the season occurred at most stations between the 20th and 27th, making the growing season this year somewhat longer than usual at most places. Temperatures during the first two weeks averaged somewhat above normal, helping considerably in maturing late flax and corn. The precipitation during September was slightly above normal in the extreme southeastern and extreme western parts of the State, but below normal in all other sections. The greatest minus departures occurred in the central and northeastern districts. By the end of the month pastures and ranges were getting rather dry, but threshing was progressing rapidly.

TEMPERATURE

The mean temperature for the State was 56.8°, or 0.4° above the normal, and 4.5° higher than the mean for September, 1926. The highest mean reported was 64.0° at Cando, Towner County; the lowest was 48.6° at Powers Lake, Burke County. The highest temperature reported was 101° at Carson, Grant County, on the 4th; the lowest was 10° at Hansboro, Towner County, on the 26th. The greatest monthly range of temperature was 84° at Minot, Ward County; the least was 59° at Cando, Towner County. The greatest daily range was 57° at Eckman, Bottineau County, on the 21st, and at Lisbon, Ransom County, on the 18th.

PRECIPITATION

The average precipitation for the State was 0.93 inch, or 0.71 inch below the normal, and 1.49 inches less than the average for September, 1926. The greatest monthly amount reported was 4.46 inches at Fryburg, Billings County; there was none at Melville, Foster County. The greatest amount recorded in any 24 consecutive hours was 2.88 inches at McLeod, Ransom County, on the 9th. The average snowfall was a trace. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Willow City on the 1st; at Crosby, Foxholm and Velva on the 3d; at Crosby and Foxholm on the 4th; at Crosby, Towner and Williston on the 5th; at Velva on the 6th; at Williston on the 7th; at Foxholm on the 14th; at McKinney on the 15th; at Grand Forks and Willow City on the 18th; at Arnegard on the 20th; at McClusky on the 22d; at Ellendale, Foxholm, Grand Forks, McKinney, Velva and Williston on the 25th; at Towner and Williston on the 26th; at Foxholm on the 27th; at Foxholm and Williston on the 28th; and at McKinney on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI — BISMARCK, N. D., OCTOBER, 1927 — No. 10

GENERAL SUMMARY

Mild, pleasant weather prevailed throughout the month. It was very favorable for threshing and all other outdoor work. Considerable fall plowing was done, but the ground was too dry in some sections in the southwestern part of the State where the precipitation averaged below normal. The precipitation was considerably above normal at most places in the northern part of the State. No precipitation occurred between the 18th and 26th at any of the reporting stations and a few damaging prairie fires occurred during that period in some southern and central counties. Pastures needed rain in some localities, but livestock was generally in excellent condition. F. J. B.

TEMPERATURE

The mean temperature for the State was 47.0°, or 3.2° above the normal, and 4.4° higher than the mean for October, 1926. The highest mean reported was 57.4° at Marmarth, Slope County; the lowest was 42.2° at Granville, McHenry County. The highest temperature reported was 88° at Bismarck, Burleigh County, on the 19th; the lowest was 12° at Bottineau, Bottineau County and at Dunseith, Rolette County, both on the 13th. The greatest monthly range of temperature was 70° at Linton, Emmons County; the least was 42° at Pembina, Pembina County. The greatest daily range in temperature was 57° at Marmarth, Slope County, on the 7th.

PRECIPITATION

The average precipitation for the State was 1.39 inches, or 0.39 inch above the normal, and 0.10 inch less than the average for October, 1926. The greatest monthly amount reported was 3.30 inches at Towner, McHenry County; the least was 0.16 inch at New England, Hettinger County. The greatest amount recorded in any 24 consecutive hours was 1.40 inches at Towner, McHenry County, on the 11th. The average snowfall was 1.0 inch; the greatest fall reported being 6.0 inches at Devils Lake, Towner and Willow City. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Linton on the 1st; at Willow City on the 2d; at Beach on the 3d, 4th and 5th; at Foxholm and Grand Forks on the 6th; at Foxholm on the 7th; at Bottineau on the 12th; at Towner on the 13th and 14; at Arnegard and McKinney on the 20th; at Carson, McKinney and Richardton on the 21st; at Arnegard, Beach, Berthold Agency, Bismarck, Bottineau, Crosby, Devils Lake, Dogden Butte, Ellendale, Fessenden, Fullerton, Grand Forks, Howard, McClusky, McKinney, Minto, Napoleon, Richardton, Sharon, Stanton, Trotters and Willow City on the 22d; at Arnegard, Beach, Bismarck, Bottineau, Ellendale, Energy, Fessenden, Fullerton, Grand Forks, Howard, McClusky, McKinney, Minto, Stanton, Towner, Trotters and Willow City on the 23d; at Bismarck, Bottineau, Carson, Ellendale, Energy, Fessenden, Howard, McKinney, Sharon, Stanton and Trotters on the 24th; at Bismarck, Howard, McKinney and Willow City on the 25th; at Linton on the 26th; and at Velva on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., NOVEMBER, 1927 No. 11

GENERAL SUMMARY

The month opened with weather favorable for farm and other outdoor work and rapid progress was made in fall plowing, corn husking and in grain marketing during the first six days. On the 7th, however, snow was general throughout the State and the ground became sufficiently frozen to stop fall plowing. Scattered snows throughout the remainder of the month greatly interfered with corn husking and at the close of the month there was much unhusked. Much road graveling throughout the main trails of the State was accomplished. Livestock was generally in good to excellent condition, but some housing and yard feeding was necessary during the last few days of the month.

TEMPERATURE

The mean temperature for the State was 20.7°, or 5.9° below the normal, and 0.8° lower than the mean for November, 1926. The highest mean reported was 31.8° at Marmarth, Slope County; the lowest was 12.4° at Dunseith, Rolette County. The highest temperature reported was 59° at Berthold Agency, McLean County, on the 3d; the lowest was −24° at Eckman, Bottineau County, and at McKinney, Renville County, on the 17th. The greatest monthly range of temperature was 79° at Eckman, Bottineau County; the least was 49° at Pembina, Pembina County. The greatest daily range in temperature was 48° at Marmarth, Slope County, on the 11th and 12th.

PRECIPITATION

The average precipitation for the State was 0.70 inch, or 0.12 inch above the normal, and 0.05 inch more than the average for November, 1926. The greatest monthly amount reported was 1.56 inches at Mandan, Morton County; the least was 0.17 inch at Hettinger, Adams County, and at Linton, Emmons County. The greatest amount recorded in any 24 consecutive hours was 0.60 inch at Larimore, Grand Forks County, on the 7th, and at Wilton, McLean County, on the 28th. The average snowfall was 7.1 inches; the greatest depth reported being 16.0 inches at Hansboro, Towner County. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS

Auroras were observed at Napoleon on the 26th; at Grand Forks, Minto and Sharon on the 29th; and at McLeod and Towner on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVI   Bismarck, N. D., December, 1927   No. 12

GENERAL SUMMARY

The weather during December, 1927, was the coldest of record in the climatological history of North Dakota, covering a period of thirty-seven years. The precipitation averaged above the normal, the snowfall being unusually heavy in some sections. As a result of these adverse weather conditions, there was much suffering among humans and livestock, outdoor work was brought almost to a stop, and highways were blocked in many sections of the State. Light to heavy snows marked the opening of the month and continued generally throughout the first decade. Snows were frequent on the 14-16th, and again on the 28-30th.

TEMPERATURE

The mean temperature for the State was −1.8°, or 14.8° below the normal, and 11.0° lower than the mean for December, 1926. The highest mean reported was 4.5° at Amidon, Slope County; the lowest was −7.6° at Steele, Kidder County. The highest temperature reported was 43° at McKinney, Renville County, on the 5th; the lowest was −38° at Pettibone, Kidder County, on the 9th. The greatest monthly range of temperature was 74° at Dunn Center, Dunn County; the least was 46° at Pembina, Pembina County. The greatest daily range in temperature was 62° at McClusky, Sheridan County, on the 14th.

PRECIPITATION

The average precipitation for the State was 0.75 inch, or 0.21 inch above the normal, and 0.18 inch more than the average for December, 1926. The greatest monthly amount reported was 3.50 inches at Power, Richland County; there was none at Pembina, Pembina County, and at Starkweather, Ramsey County. The greatest amount recorded in any 24 consecutive hours was 1.50 inches at Power, Richland County, on the 14th. The average snowfall was 8.7 inches; the greatest fall reported was 35.0 inches at Power, Richland County. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Grand Forks on the 2d; at Foxholm on the 12th; at Bottineau, Crosby, Devils Lake, Foxholm, Grand Forks, and Sharon on the 13th; at Crosby and Dogden Butte on the 14th and 15th; at Crosby and Foxholm on the 16th and 17th; at Arnegard, Bottineau, Carson, Foxholm, Grand Forks, Metigoshi, Napoleon, Stanton, and Williston on the 18th; at McLeod on the 19th; and at Carson on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

Daily Precipitation for December, 1927

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVI BISMARCK, N. D., ANNUAL, 1927 No. 13

GENERAL SUMMARY

Taken from a crop standpoint, the weather during 1927 was one of the best in the history of the State. The year opened with the temperature above the normal, and this condition continued during January, February and March. From April to August, inclusive, the temperature averaged below normal. September and October were warmer than normal, while during November and December the temperature averaged decidedly below the normal, especially during the latter month, which was the coldest December of record. The precipitation for the year was, with but one exception, the highest of record. Precipitation above the normal occurred during April and May, the principal spring months, and during July and August in summer and October, November and December. While several quite severe hailstorms were reported, the number of destructive storms was considerably below the average. A large amount of Federal Aid highway construction was accomplished in all parts of the State.

The mean annual temperature for the State was 38.0°, or 0.8° below the normal, and 2.7° lower than the mean for 1926. The highest mean annual temperature reported was 41.7° at McLeod, Ransom County; the lowest was 33.7° at Granville, McHenry County. The highest temperature reported was 101° at Carson, Grant County, on September 4th; the lowest was -44° at Hansboro, Towner County, on January 24th.

The average annual precipitation for the State was 21.52 inches, or 3.58 inches above the normal, and 5.82 inches greater than the average for 1926. The greatest annual precipitation reported was 32.12 inches at Fullerton, Dickey County; the least was 13.87 inches at New England, Hettinger County. The greatest monthly amount reported was 9.30 inches at Pembina, Pembina County, in May; stations reporting none were Westhope in January; Pembina and Stanton in February; Pembina in March; Melville in September; and Pembina and Starkweather in December. The precipitation averaged below the normal in January, February, March, June and September, and above the normal during the remaining months. The average snowfall for the State was 36.2 inches. The average number of days with 0.01 inch or more of precipitation was 79. There were 150 clear days, 102 partly cloudy days and 113 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—The first half of the month was mild and pleasant, with but one short storm period; the latter half was more stormy. General storm periods occurred on the 7-8th, 16-20th, and 29-31st. The snow covering was ample for winter rye and as a rule the weather was favorable for livestock.

FEBRUARY.—Generally favorable weather prevailed throughout the State during the month, the temperature during the latter half being mild and pleasant. Livestock ranged freely on ranges and harvested fields, thus saving much feed, of which there was a great scarcity.

MARCH.—Taken as a whole the weather was favorable for outdoor work and for livestock. As rough feed was scarce a great benefit accrued to livestock by the ranging of livestock on meadows, ranges and harvested fields. Practically no field work was done due to frozen ground.

APRIL.—The month opened with weather favorable for spring work on farms, and this condition prevailed throughout the month with the exception of storm periods on the 4th, 9-10th, and 15-17th. Farm work made excellent progress during the last decade and seeding was well advanced at the close of the month. Wild and tame grasses made rapid growth and afforded much feed for livestock, which was in fair to good condition.

MAY.—Unusually favorable weather for crops prevailed throughout the State during the month. Quite often when the Red River valley receives just the proper amount, the central and western portions of the State receive too little; during the present season, however, the largest amounts were generally recorded in the central portion. The average for the State was the highest of record for May in the climatological history of the section. Due to low average temperatures small grains stooled well and were in excellent condition at the close of the month. Pastures, ranges and meadows were excellent, affording ample feed for livestock and insuring an abundant hay crop.

JUNE.—Favorable weather generally prevailed, although the precipitation was below the normal. There was an abundance of sunshine, but the temperature was slightly deficient. The rainfall was ample for all crop needs and was fairly well distributed geographically and throughout the month. Several severe hail and windstorms occured causing considerable damage. At the close of the month the prospects for small grain crops were never better. Corn though somewhat backward was generally of good stand and color.

JULY.—Taken as a whole the weather of the month was the most favorable of any July for several years. The temperature was below the normal and was especially favorable for small grains of all kinds. The precipitation was above the normal and was quite well distributed. Although the night temperatures were somewhat too cool for corn, that crop made good progress and at the close of the month was of nearly normal growth, much being in the tasseled stage. Much rye harvesting was done, especially during the last decade, and some harvesting of early sown spring wheat and barley. Reports of black stem rust in spring wheat were received but due to the advanced stage of that crop the loss was not serious.

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49]

AUGUST.—The weather was favorable for harvesting, threshing and other kinds of farm and outdoor work. The temperature averaged below the normal and the nights were somewhat too cool for corn, especially during the first decade and from the 18th to the 24th. Frosts on the 23d did some damage in the northern portion of the State. The precipitation was above normal in all sections except in parts of the extreme western and extreme southeastern counties. The greatest amounts of precipitation occurred from the 15th to the 17th, and from the 26th to the end of the month. These storms interfered somewhat with harvesting and threshing. Reports of black stem rust in spring wheat were received but the damage was usually light.

SEPTEMBER.—Favorable weather generally prevailed in all parts of the State. The first killing frost of the season occurred at most stations between the 20th and 27th, making the growing season somewhat longer than the average at most stations. The temperature was above the normal during the first two weeks, helping considerably in maturing late flax and corn. The precipitation during the latter half of the month was light and at the close of the month in some sections pastures and ranges were in need of moisture.

OCTOBER.—Mild and pleasant weather prevailed throughout the month, being favorable for threshing and other outdoor work. Considerable fall plowing was done, but in some sections the ground was too dry. Scattered showers occurred from the first to the 12th, but from the 13th to the 27th there was practically no precipitation whatever. Showers were general from the 29th to the close of the month.

NOVEMBER.—The month opened with weather favorable for farm work and rapid progress was made in fall plowing, corn husking and grain marketing during the first six days. On the 7th, however, snow was general throughout the State and the ground was frozen sufficiently to stop fall plowing. Scattered snows throughout the month greatly interfered with corn husking and at the end of the month there was much unhusked. Much road construction in the form of graveling was done during the first decade.

Climatological Summary, 1927

Month	Temperature in degrees Fahrenheit				Precipitation, in inches				Sky			Prevailing direction of the wind

Annual	38.0	−0.8	101	−44	21.52	+3.58	36.2	79	150	102	113	nw.

DECEMBER.—The weather during December was the coldest of record in the climatological history of the State. The precipitation averaged above the normal, the snowfall being unusually heavy in some sections. As a result of these adverse weather conditions there was much suffering among humans and livestock, outdoor work was greatly delayed and highways in many parts of the State were blocked.

CLIMATOLOGICAL DATA

UNIVERSITY OF ILLINOIS

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII   Bismarck, N. D., January, 1928   No. 1

GENERAL SUMMARY

The month opened with unusually low temperature accompanied by high winds generally. No snow occurred during this period but the accumulated snow on the ground drifted badly, causing much suffering to livestock and effectively blocking many highways. Mild weather began on the 5th and continued generally to the close of the month, the mean temperature for the month being the eighth highest of record. Practically no precipitation occurred during the first eleven days. From the 12th to the 16th, inclusive, light precipitation was general. Scattered snow-flurries occurred on the 23-24th, and from the 28th to the close of the month. The precipitation, however, was greatly deficient. Livestock during the month ranged freely, saving much feed.

TEMPERATURE

The mean temperature for the State was 13.0°, or 8.1° above the normal, and 2.9° higher than the mean for January, 1927. The highest mean reported was 20.3° at Lisbon, Ransom County; the lowest was 4.4° at Langdon, Cavalier County. The highest temperature reported was 50° at Manfred, Wells County, on the 12th, and at Marmarth, Slope County, on the 11th; the lowest was −41° at Linton, Emmons County, on the 2d, and at Marmarth, Slope County, on the 1st. The greatest monthly range of temperature was 91° at Marmarth, Slope County; the least was 62° at Pembina, Pembina County. The greatest daily range in temperature was 70° at Marmarth, Slope County, on the 1st.

PRECIPITATION

The average precipitation for the State was 0.21 inch, or 0.33 inch below the normal, and 0.20 inch less than the average for January, 1927. The greatest monthly amount reported was 1.04 inches at Cando, Towner County; Lisbon, Ransom County, and Wahpeton, Richland County reported none. The average snowfall was 2.3 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Linton on the 1st; at Bottineau on the 4th and 18th; at Arnegard and Foxholm on the 20th; at Foxholm and Velva on the 21st; at Bottineau on the 24th; at Howard on the 26th; at Carson and Williston on the 27th; and at Bottineau and Foxholm on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII Bismarck, N. D., February, 1928 No. 2

GENERAL SUMMARY

Mild temperature and deficient precipitation characterized the weather of the month. The mean temperature (18.8°) was one of the highest of record, having been exceeded but three times in the climatological history of the State. The average precipitation (0.10 inch) was the lowest of record, and was only equaled once. Ice harvest made rapid progress during the first decade and was completed at the close of the second. While the snowfall of the month was light, winter grains came through in good condition generally. Livestock ranged freely on pastures, meadows and harvested fields, saving much feed. The main highways were in mostly good condition, but many side roads were almost impassable.

TEMPERATURE

The mean temperature for the State was 18.8°, or 10.9° above the normal, and 5.5° higher than the mean for February, 1927. The highest mean reported was 22.8° at Hettinger, Adams County; the lowest was 12.0° at Langdon, Cavalier County. The highest temperature reported was 59° at Hettinger, Adams County, on the 11th; the lowest was -19° at McLeod, Ransom County, on the 24th. The greatest monthly range of temperature was 72° at Berthold Agency, McLean County; the least was 45° at Lisbon, Ransom County. The greatest daily range in temperature was 55° at Amenia, Cass County, on the 3d, and at Berthold Agency, McLean County on the 18th.

PRECIPITATION

The average precipitation for the State was 0.10 inch, or .39 inch below the normal, and 0.26 inch less than the average for February, 1927. The greatest monthly amount reported was 0.51 inch at McLeod, Ransom County; eleven stations reported none. The average snowfall was 1.2 inches. The average number of days with 0.01 inch or more of precipitation was 2.

AURORAS

Auroras were observed at Foxholm on the 11th; at Metigoshe on the 12th; at Arnegard, Bottineau, Foxholm, Howard, Trotters and Willow City on the 13th; at Hansboro on the 14th; at Bottineau on the 16th; at Stanton on the 17th; at Carson, Foxholm, Grand Forks, Howard and Stanton on the 18th; at Foxholm on the 20th; at Bottineau on the 21st; at Trotters on the 23; at Devils Lake, Foxholm, Howard, Metigoshe and Sharon on the 24th; and at Bottineau on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVII BISMARCK, N. D., MARCH, 1928 No. 3

GENERAL SUMMARY

The weather during March was mild and pleasant, the mean temperature having been exceeded but four times in the climatological history of the State. There was also a deficiency of precipitation in nearly all sections, and no severe storms occurred. As a result of these favorable conditions livestock ranged freely on ranges, pastures and harvested fields, thus saving much feed. Highways were generally open to auto and wagon traffic. Spring work on farms consisted mostly in burning of stubble fields, straw stacks and corn stalks, very little plowing or discing being done. Winter rye came through generally in good condition, few reports of winter killing having been reported.

TEMPERATURE

The mean temperature for the State was 28.1°, or 5.5° above the normal, and 2.3° lower than the mean for March, 1927. The highest mean reported was 34.0° at Beach, Golden Valley County and at Hettinger, Adams County; the lowest was 21.2° at Langdon, Cavalier County. The highest temperature reported was 85° at Edgeley, Lamoure County, on the 24th; the lowest was −17° at Eckman, Bottineau County, on the 7th and at Starkweather, Ramsey County, also on the 7th. The greatest monthly range of temperature was 93° at Eckman, Bottineau County; the least was 50° at Mott, Hettinger County. The greatest daily range in temperature was 64° at Edgeley, Lamoure County, on the 24th.

PRECIPITATION

The average precipitation for the State was 0.54 inch, or 0.29 inch below the normal, and 0.20 inch less than the average for March, 1927. The greatest monthly amount reported was 2.60 inch at Cando, Towner County; there was none at Fort Yates, Sioux County and at Pembina, Pembina County. The average snowfall was 4.8 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Howard on the 11th; at Epping on the 12th; at Devils Lake, Howard, Metigoshe and Trotters on the 13th; at Bottineau on the 14th; at Bottineau, Dogden Butte, Howard, Foxholm and Willow City on the 19th; at Willow City on the 20th; at Howard, Foxholm and Grand Forks on the 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

VOL. XXXVII   BISMARCK, N. D., APRIL, 1928   NO. 4

GENERAL SUMMARY

The month opened with the temperature below normal, and spring work on farms was delayed considerably by frozen ground, especially in the mornings, a condition that prevailed throughout much of the first and second decades. More progress was made during the third decade, but at the close of the month seeding and other work was somewhat behind the average. Vegetation made slow growth generally. Pastures and ranges were also backward, not affording much feed for livestock. Highways were generally in excellent condition and much construction work was begun.

TEMPERATURE

The mean temperature for the State was 35.9°, or 5.8° below the normal, and 5.5° lower than the mean for April, 1927. The highest mean reported was 39.6° at McLeod, Ransom County ;the lowest was 27.8° at Melville, Foster County. The highest temperature reported was 84° at Minot, Ward County, on the 28th; the lowest was -6° at Eckman, Bottineau County, on the 19th. The greatest monthly range of temperature was 38° at Eckman, Bottineau County; the least was 57° at Granville, McHenry County, and at Melville, Foster County. The greatest daily range in temperature was 56° at Jamestown, Stutsman County, on the 1st.

PRECIPITATION

The average precipitation for the State was 0.88 inch, or 0.50 inch below the normal, and 0.82 inch less than the averge for April, 1927. The greatest monthly amount reported was 2.30 inch at Mott, Hettinger County; the least was 0.08 nch at Westhope, Bottineau County. The average snowfall was 5.0 inches. The average number of days with 0.01 inch r more of precipitation was 5.

AURORAS

Auroras were observed at Steele on the 15th and at Bottineau n the 16th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVII BISMARCK, N. D., MAY, 1928 No. 5

GENERAL SUMMARY

The month opened with weather favorable for farm and other outdoor work, although the top soil was rather too dry for germination and growth of grains. This condition obtained during the first one-half of the month. Showers, light to moderate, prevailed from the 14th to the 17th, inclusive. The weather was dry from the 18th to the 30th, inclusive, with generally high temperatures on the 23d and 24th, which dried the pastures and meadows, greatly reducing feed for livestock. At the close of the month small grains and pastures were generally in serious need of rain. Corn was the only crop that was in first class condition.

TEMPERATURE

The mean temperature for the State was 58.2°, or 5.6° above the normal, and 10.2° higher than the average for May, 1927. The highest mean reported was 63.2° at Berthold Agency, McLean County; the lowest was 52.3° at Melville, Foster County. The highest temperature reported was 107° at Berthold Agency, McLean County, on the 24th; the lowest was 16° at Eckman, Bottineau County, on the 12th. The greatest monthly range of temperature was 82° at Eckman, Bottineau County; the least was 59° at Steele, Kidder County. The greatest daily range in temperature was 58° at Energy, McLean County, on the 12th, and at Linton, Emmons County, on the 4th.

PRECIPITATION

The average precipitation for the State was 1.15 inches, or 1.40 inches below the normal, and 4.47 inches lower than the average for May, 1927. The greatest monthly amount reported was 3.34 inches at Richardton, Stark County; the least was 0.22 inch at Ashley, McIntosh County. The greatest amount recorded in any 24 consecutive hours was 1.74 inches at Cooperstown, Griggs County, on the 17th. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS

Auroras were observed at Foxholm on the 7th; at Howard on the 8th; at Foxholm on the 10th; at Arnegard and Fullerton on the 11th; at Foxholm on the 17th; at Arnegard on the 20th; at Howard on the 21st; at Napoleon on the 25th; at Foxholm on the 26th; at Arnegard, Bottineau, Carson, Devils Lake, Foxholm and Velva on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII   Bismarck, N. D., June, 1928   No. 6

GENERAL SUMMARY

Cool weather prevailed throughout the month in all sections of the State. It was the coolest June since 1916. The temperature was below freezing on the 2d-3d and again on the 9th-10th at many places and some garden truck, corn and other tender crops were damaged by frost. At the close of the month temperatures were somewhat higher. Crops needed rain at the beginning of the month and pastures and ranges were drying, but from the 4th to the 30th good showers occurred in all sections. June was the first month in 1928 with precipitation above normal. Heavy rain fell at many places on the 7th-8th, 11th-12th and again on the 18-19th. Only five other years since 1892 had more rainfall in June than 1928. By the close of the month crops were in good condition generally, but more sunshine and higher temperatures were needed.

TEMPERATURE

The mean temperature for the State was 58.2°, or 4.6° below the normal, and 3.0° lower than the average for June, 1927. The highest mean reported was 61.2° at Pembina, Pembina County; the lowest was 54.2° at Steele, Kidder County. The highest temperature reported was 92° at Melville, Foster County, on the 30th; the lowest was 24° at Melville, Foster County, on the 8th. The greatest monthly range of temperature was 68° at Melville, Foster County; the least was 38° at Dunn Center, Dunn County. The greatest daily range in temperature was 52° at Pembina, Pembina County.

PRECIPITATION

The average precipitation for the State was 5.07 inches, or 1.57 inches above the normal, and 2.23 inches more than the average for June, 1927. The greatest monthly amount reported was 10.61 inches at Stowers, Adams County; the least was 1.88 inches at Power, Richland County. The average number of days with 0.01 inch or more of precipitation was 12.

AURORAS

Auroras were observed at Beach and Foxholm on the 12th; at Bottineau and Willow City on the 13th; at Ellendale on the 16th and 17th; and at Towner on the 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for June, 1928

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

ol. XXXVII Bismarck, N. D., July, 1928 No. 7

GENERAL SUMMARY

Weather favorable for crops prevailed generally throughout he month. No unusually high or unusually low temperatures ccurred in any section. The precipitation for the State averged 5.05 inches, which exceeds by 0.63 inch the greatest averge ever recorded during July in North Dakota since records egan. This precipitation combined with the 5.07 inches which ell during June supplied crops with ample moisture. Rain fell n some parts of the State on every day during the month, but mounts were light and scattered after the 22d. A tornado was eported in the northeast corner of Ramsey County and the outhwest corner of Cavalier County on July 5, and many farm uildings were destroyed, cattle killed and crops damaged. evere wind and hail storms were also reported from other arts of the State, particularly in the southeastern and northestern sections.

F.J.B.

TEMPERATURE

The mean temperature for the State was 67.4°, or 0.1° below he normal, and 2.0° higher than the average for July, 1927. he highest mean reported was 74.8° at Melville, Foster ounty; the lowest was 63.6° at Dunn Center, Dunn County nd at Pembina, Pembina County. The highest temperature eported was 96° at Powers Lake, Burke County, on the 23d; e lowest was 38° at Hansboro, Towner County, on the 29th. he greatest monthly range of temperature was 55° at Powers ake, Burke County; the least was 39° at Bottineau, Bottineau ounty, Grand Forks, Grand Forks County and at Sharon, teele County. The greatest daily range in temperature was 7° at Pembina, Pembina County.

PRECIPITATION

The average precipitation for the State was 5.05 inches, or .44 inches above the normal, and 2.20 inches more than the erage for July, 1927. The greatest monthly amount reported as 12.22 inches at Berthold Agency, McLean County; the ast was 1.77 inches at Alpha, Golden Valley County. The erage number of days with 0.01 inch or more of precipitation as 10.

AURORAS

Auroras were observed at Verona on the first; at Ellendale d Velva on the 7th; at Ashley, Carson and Ellendale on the h; at Arnegard, Carson, Foxholm, Fullerton, Grand Forks d Ellendale on the 21st; at Ashley, Crosby, Dogden Butte, llendale, Foxholm and Steele on the 22d; at Moorhead and owner on the 23d; at Moorhead on the 24th; at Powers Lake the 28th and 29th; and at Verona on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for July, 1928

ORRIS W. ROBERTS, Meteorologist

VOL. XXXVII BISMARCK, N. D., AUGUST, 1928 No. 8

GENERAL SUMMARY

The month of August was favorable for crops and farm work in most sections of the State although rain delayed harvesting and threshing somewhat, and severe scattered hailstorms at the beginning of the month and again on the 15th, caused considerable damage to crops. It was the wettest August since 1918, and the third consecutive month with precipitation above normal, while from January to June the precipitation was below normal. The precipitation was well distributed throughout the month, but a dry period occurred from the 7th to the 13th. Heavy rain fell in many parts of the State on the 1st and again on the 27th. The wind movement was light and the temperature averaged near the normal although some corn, flax and garden truck in exposed places were damaged by frost on the 23d-24th.

F. J. B.

TEMPERATURE

The mean temperature for the State was 64.8°, or 0.6° below the normal, and 1.4° higher than the average for August, 1927. The highest mean reported was 73.0° at Melville, Foster County; the lowest was 60.1° at Pembina, Pembina County. The highest temperature reported was 105° at Beach, Golden Valley County, on the 11th; the lowest was 25° at Pembina, Pembina County, on the 31st. The greatest monthly range of temperature was 70° at Arnegard, Beach, Lisbon and Pembina; the least was 54° at Dogden Butte, McLean County and at Moorhead, Minn. The greatest daily range in temperature was 55° at Amidon, Slope County on the 18th.

PRECIPITATION

The average precipitation for the State was 3.30 inches, or 1.02 inches above the normal, and 0.07 inch more than the average for August, 1927. The greatest monthly amount reported was 9.17 inches at Edgeley, Lamoure County; the least was 0.20 inch at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 4.42 inches at Turtle Lake, McLean County on the 27th. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS

Auroras were observed at Arnegard, Crosby and Foxholm on the 4th; at Crosby on the 5th; at Crosby, Foxholm, Towner and Willow City on the 6th; at Crosby on the 7th; at Crosby and Towner on the 8th; at Crosby, Dunn Center, Foxholm, Sharon and Moorhead on the 10th; at Arnegard, Crosby, Dunn Center and Moorhead on the 11th; at Arnegard, Bottineau, Crosby, Foxholm, Napoleon and Towner on the 12th; at Towner on the 21st; at Steele on the 22d; at Devils Lake and Sharon on the 25th; at McClusky on the 26th; and at Howard on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for August, 1928

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII Bismarck, N. D., September, 1928 No. 9

GENERAL SUMMARY

Although the precipitation for the State averaged considerably below the normal, it was not well distributed and heavy local showers caused some crop damage. Very little rain from the 1st to the 6th and from the 17th to the close of the month, but showers between the 8th and 16th interfered greatly with threshing. Threshing and other farm work made rapid progress after the 16th. Very low temperatures for so early in the season occurred from the 23d to the 26th and late corn and flax were damaged considerably in some sections of the State. By the close of the month fall plowing and rye seeding were well advanced, with much rye up to good stand and color. Fall feed was abundant and livestock was in excellent condition, but the ground was getting very dry in most sections. F.J.B.

TEMPERATURE

The mean temperature for the State was 53.9°, or 2.5° below the normal, and 2.9° lower than the mean for September, 1927. The highest mean reported was 59.0° at Melville, Foster County; the lowest was 46.4° at Pembina, Pembina County. The highest temperature reported was 95° at Arnegard, McKenzie County, on the 6th; the lowest was 12° at Berthold Agency, McLean County, on the 12th. The greatest monthly range of temperature was 81° at Arnegard, McKenzie County; the least was 54° at Moorhead, Minn. The greatest daily range in temperature was 60° at Berthold Agency, McLean County on the 18th, and at Willow City, Bottineau County on the 29th.

PRECIPITATION

The average precipitation for the State was 0.93 inch, or 0.71 inch below the normal, and the same as the mean for September, 1927. The greatest monthly amount reported was 4.89 inches at Valley City, Barnes County; the least was a trace at Howard, Minto, Park River and Pembina. The greatest amount recorded in any 24 consecutive hours was 4.22 inches at Hettinger, Adams County on the 14th. The average number of days with 0.01 inch or more of precipitation was 5. A trace of snow fell at Grand Forks on the 22d and 23d.

AURORAS

Auroras were observed at Foxholm and Sharon on the 1st; at Towner on the 2d and 7th; at Carson on the 8th; at Foxholm on the 14th, 23d and 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Daily Precipitation for September, 1928

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII Bismarck, N. D., October, 1928 No. 10

GENERAL SUMMARY

Under favorable weather conditions farming operations and other outdoor work made rapid progress. Occasional high winds delayed threshing somewhat, and due to too dry ground fall plowing was accomplished under difficulty. However, somewhat more than the usual acreage of fall plowing was done. The average precipitation for the State (0.41 inch) is, with but one exception (0.25 inch in 1895) the lowest of record for October. There was much marketing of grain and livestock, threshing was practically completed, and corn harvesting well advanced. Due to abundant feed on harvested fields and on pastures and ranges, livestock ranged freely and were in excellent condition at the close of the month.

TEMPERATURE

The mean temperature for the State was 43.5°, or 0.3° below the normal, and 3.5° lower than the mean for October, 1927. The highest mean reported was 48.5° at Wahpeton, Richland County; the lowest was 40.4° at Pembina, Pembina County. The highest temperature reported was 85° at Wahpeton, Richland County, on the 10th; the lowest was 3° at Eckman and Willow City, both in Bottineau County, on the 29th, and at McKinney, Renville County, on the 30th. The greatest monthly range of temperature was 80° at McClusky, Sheridan County; the least was 50° at Pembina, Pembina County. The greatest daily range in temperature was 52° at Howard, Williams, on the 2d.

PRECIPITATION

The average precipitation for the State was 0.41 inch, or 0.59 inch below the normal, and 0.98 less than the average for October, 1927. The greatest monthly amount reported was 1.89 inches at Wahpeton, Richland County; there was none at Cando, Towner County, Cooperstown, Griggs County, Fessenden, Wells County, and at Metigoshe, Bottineau, County. The greatest amount recorded in any 24 consecutive hours was 1.25 inches at Wahpeton, Richland County on the 15th. The average snowfall was 0.6 inch, the greatest fall reported being 5.0 inches at Mott, Hettinger County. The average number of days with 0.01 inch or more of precipitation was 2.

AURORAS

Auroras were observed at Carson, Crosby, Foxholm, Rugby, Sharon and Willow City on the 5th; at Carson, Fessenden, Foxholm, Rugby, Sharon and Willow City on the 6th; at Dogden Butte and Towner on the 7th; at McLeod, Metigoshe and Rugby on the 8th; at Dogden Butte and Howard on the 12th; at Foxholm on the 13th; at Willow City on the 14th; at Bottineau and McKinney on the 15th; at Foxholm and McLeod on the 19th; at McLeod on the 20th; at Bottineau, Carson and McLeod on the 23d; at Arnegard, Ashley, Berthold Agency, Bismarck, Bottineau, Fessenden, Foxholm, Fullerton, Grand Forks, Howard, McKinney, Metigoshe, New Salem, Rugby, Sharon, Stanton, Trotters, Velva, Verona, Williston and Moorhead, Minn. on the 24th; at Towner on the 25th; at Richardton on the 28th; at Powers Lake on the 29th; and at Stowers on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

CLIMATOLOGICAL DATA

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII   Bismarck, N. D., November, 1928   No. 11

GENERAL SUMMARY

The weather throughout North Dakota during the month was mostly mild and pleasant, and from the standpoint of personal comfort to those engaged in outdoor activities was one of the most agreeable Novembers of record. As a result of these favorable conditions, outdoor work of all kinds made rapid progress. Fall plowing continued in many parts of the State until near the end of the month. Livestock ranged freely on pastures, ranges and harvested fields, thus saving much feed. Practically all farm work, including corn husking, was completed before the close of the month. Nearly the average seeding of winter rye was accomplished, and this crop was of good stand and color.

TEMPERATURE

The mean temperature for the State was 31.0°, or 4.4° above the normal, and 10.3° higher than the average for November, 1927. The highest mean reported was 34.6° at Wahpeton, Richland County; the lowest was 24.0° at Melville, Foster County. The highest temperature reported was 70° at Carson, Grant County, on the 5th; the lowest was −11° at Berthold Agency, McLean County, on the 21st. The greatest monthly range of temperature was 71° at Berthold Agency, McLean County; the least was 40° at Melville, Foster County. The greatest daily range in temperature was 57° at Marmarth, Slope, on the 3d.

PRECIPITATION

The average precipitation for the State was 0.48 inch, or 0.10 inch below the normal, and 0.22 less than the average for November, 1927. The greatest monthly amount reported was 2.48 inches at Linton, Emmons County; there was none at five tations in the northern and western parts of the State. The greatest amount recorded in any 24 consecutive hours was 2.48 nches at Linton, Emmons County on the 14th. The average number of days with 0.01 inch or more of precipitation was 1. The average snowfall was 0.2 inch.

AURORAS

Auroras were observed at Foxholm, Powers Lake, and Rugby n the 1st; at Bottineau, Carson, Ellendale, Foxholm, Howard, Towner and Willow City on the 2d; at Arnegard, Carson, Foxholm, Grand Forks, Howard and Willow City on the 3d; at Napoleon on the 4th; at Bottineau and Foxholm on the 6th; at Willow City on the 7th; at Steele, Trotters and Williston on the 0th; at Steele and Williston on the 11th; at Devils Lake, Foxolm, Hettinger, Howard, Pettibone and Willow City on the 2th; at Bottineau, Towner, Trotters and Williston on the 3th; at Willow City on the 15th; at Foxholm, Towner and Willow City on the 16th; at Towner and Williston on the 23d; t Bottineau and Williston on the 24th; and at Carson, Foxolm, Minot and Trotters on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine Tuttle Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

NORTH DAKOTA SECTION

ORRIS W. ROBERTS, Meteorologist

Vol. XXXVII Bismarck, N. D., December, 1928 No. 12

GENERAL SUMMARY

The month opened with much cloudiness, general light snowfall and temperature below normal, a condition that continued throughout the first five days. Thereafter, except from the 17th to the 20th when light snows again occurred and temperature somewhat below normal prevailed, the weather was mild and pleasant. During the greater part of the month livestock ranged freely on pastures, ranges and harvested fields, saving much feed. At the close of the month livestock was in excellent condition. Marketing of livestock and grain constituted the greater part of farm activities. Highways, both main trails and crossroads, were in good condition at all times.

TEMPERATURE

The mean temperature for the State was 20.7°, or 7.7° above the normal, and 22.5° higher than the average for December, 1927. The highest mean reported was 25.2° at Hettinger, Adams County; the lowest was 15.4° at Melville, Foster County. The highest temperature reported was 57° at Carson, Grant County, on the 28th, at Dickinson, Stark County on the 9th and at Hettinger, Adams County on the 9th; the lowest was -30° at Hansboro, Towner County, on the 20th. The greatest monthly range of temperature was 77° at Fessenden, Wells County and at Maddock, Benson County; the least was 57° at Foxholm, Ward County. The greatest daily range in temperature was 57° at Dickinson, Stark County on the 8th.

PRECIPITATION

The average precipitation for the State was 0.28 inch, or 0.26 inch below the normal, and 0.47 less than the average for December, 1927. The greatest monthly amount reported was 0.95 inch at Cooperstown, Griggs County; there was none at Lisbon, Ransom County, and at Melville, Foster County. The greatest amount recorded in any 24 consecutive hours was 0.70 inch at Howard, Williams County on the 2d. The average snowfall was 3.2 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS

Auroras were observed at Rugby on the first; at Velva on the 2d; at Arnegard, Beach and Foxholm on the 11th; at Bottineau, Crosby, Foxholm and Napoleon on the 12th; and at Bottineau on the 13th, 22d and 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Dogden Butte, near Butte; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.; Metigoshe, Bottineau; Stowers, Lemmon, S. D.

Vol. XXXVII Bismarck, N. D., Annual, 1928 No. 13

GENERAL SUMMARY

The moisture content of the soil in the spring of 1928 was generally ample for germination of grains, due to the excess of precipitation during the fall of 1927. During the first five months of 1928, however, there was a general deficiency, averaging nearly three inches. At the close of May grains of all kinds were up to good stand and color, but both grain and pastures were in need of moisture. June opened dry and cool, with freezing temperatures quite common on the 2d and 3d and again on the 9th and 10th. The long continued drought was broken on the 4th of June, and thereafter there was an excess of moisture during June, July and August, bringing the average for the year to considerably above normal. Crop results in North Dakota were favorable from a yield standpoint, but considerable dissatisfaction was expressed over the low prices which prevailed.

The mean annual temperature for the State was 41.1°, or 2.3° above the normal, and 3.1° higher than the mean for 1927. The highest mean annual temperature reported was 44.3° at Wahpeton, Richland County; the lowest was 37.5° at Langdon, Cavalier County. The highest monthly mean temperature reported was 74.8° at Melville, Foster County in July; the lowest was 4.4° at Langdon, Cavalier County in January. The highest temperature reported was 107° at Berthold Agency, McLean County, on May 24th; the lowest was −41° at Marmarth, Slope County on January 1st, and at Linton, Emmons County, on January 2d.

The average annual precipitation for the State was 18.40 inches, or 0.46 inch above the normal, and 3.12 inches less than the average for 1927. The greatest annual precipitation reported was 30.38 inches at Edgeley, LaMoure County; the least was 10.70 inches at Howard, Williams County. The greatest monthly amount reported was 12.22 inches at Berthold Agency, McLean County, in July; there was none at several stations in January, February, March, October, November and December. The precipitation averaged above the normal in June, July and August; and below the normal during the remaining months. The average snowfall for the State was 17.3 inches. The average number of days with 0.01 inch or more of precipitation was 59. There were 177 clear days, 101 partly cloudy days and 88 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

January.—The month opened with unusually low temperature, accompanied generally by high winds. Accumulated snow drifted badly and greatly interfered with railway and highway traffic. Higher temperature followed and only light precipitation occurred. During the latter part of the month livestock ranged freely on pastures, ranges and harvested fields.

February.—Mild temperature and deficient precipitation characterized the weather of the month. Unusually high temperature for February prevailed in all parts of the State. The average precipitation was the lowest for February ever recorded in the climatological history of the State, being equalled but once (1913).

March.—The weather during the month was mild and pleasant, and there was a deficiency in precipitation. As a result of these favorable conditions livestock ranged freely, and little yard feeding was necessary. Spring work on farms consisted mostly in burning and otherwise clearing land for seeding. Winter rye generally came through in good condition, only a few reports of winter killing being received.

April.—Frozen ground caused by temperatures below normal at the opening of the month delayed farm work during much of the first and second decades. More favorable conditions prevailed during the third decade, but at the end of the month spring work on farms was somewhat backward. Pastures and ranges were also backward, affording little feed for livestock.

May.—Weather favorable for farm work prevailed, although but little precipitation occurred during the first twelve days. As a result of the dry conditions, grain was slow in germinating. Showers were general from the 13th to the 17th, greatly improving conditions, although at the close of the month both crops and pastures were in serious condition from lack of moisture.

June.—The month opened with cool and dry weather. The temperature was generally below freezing on the 2-3d and again on the 9-10th. The drought that prevailed at the close of May continued until the 4th, when general rains began and ample precipitation continued to the close of the month. During all preceding months of 1928 the precipitation was below the normal, June being the first month to show an excess. By the close of the month crops were in good condition, and pastures ranges and meadows were nearly normal.

July.—Weather favorable for crops prevailed in all sections throughout the month. The average precipitation for the State was the highest of record for July. The heavy perecipitation during July, following the generous rains in June, caused crops to show rapid growth, and at the close of the month crop prospects were excellent. A destructive tornado in the northeast part of the State caused considerable damage. Several severe wind and hail storms were reported in other sections of the State.
